

Improving the Effectiveness of RT: ***Interstitial Fluid Dynamics in*** ***Human Tumors***

Michael Milosevic

Radiation Medicine Program
Princess Margaret Hospital
Toronto

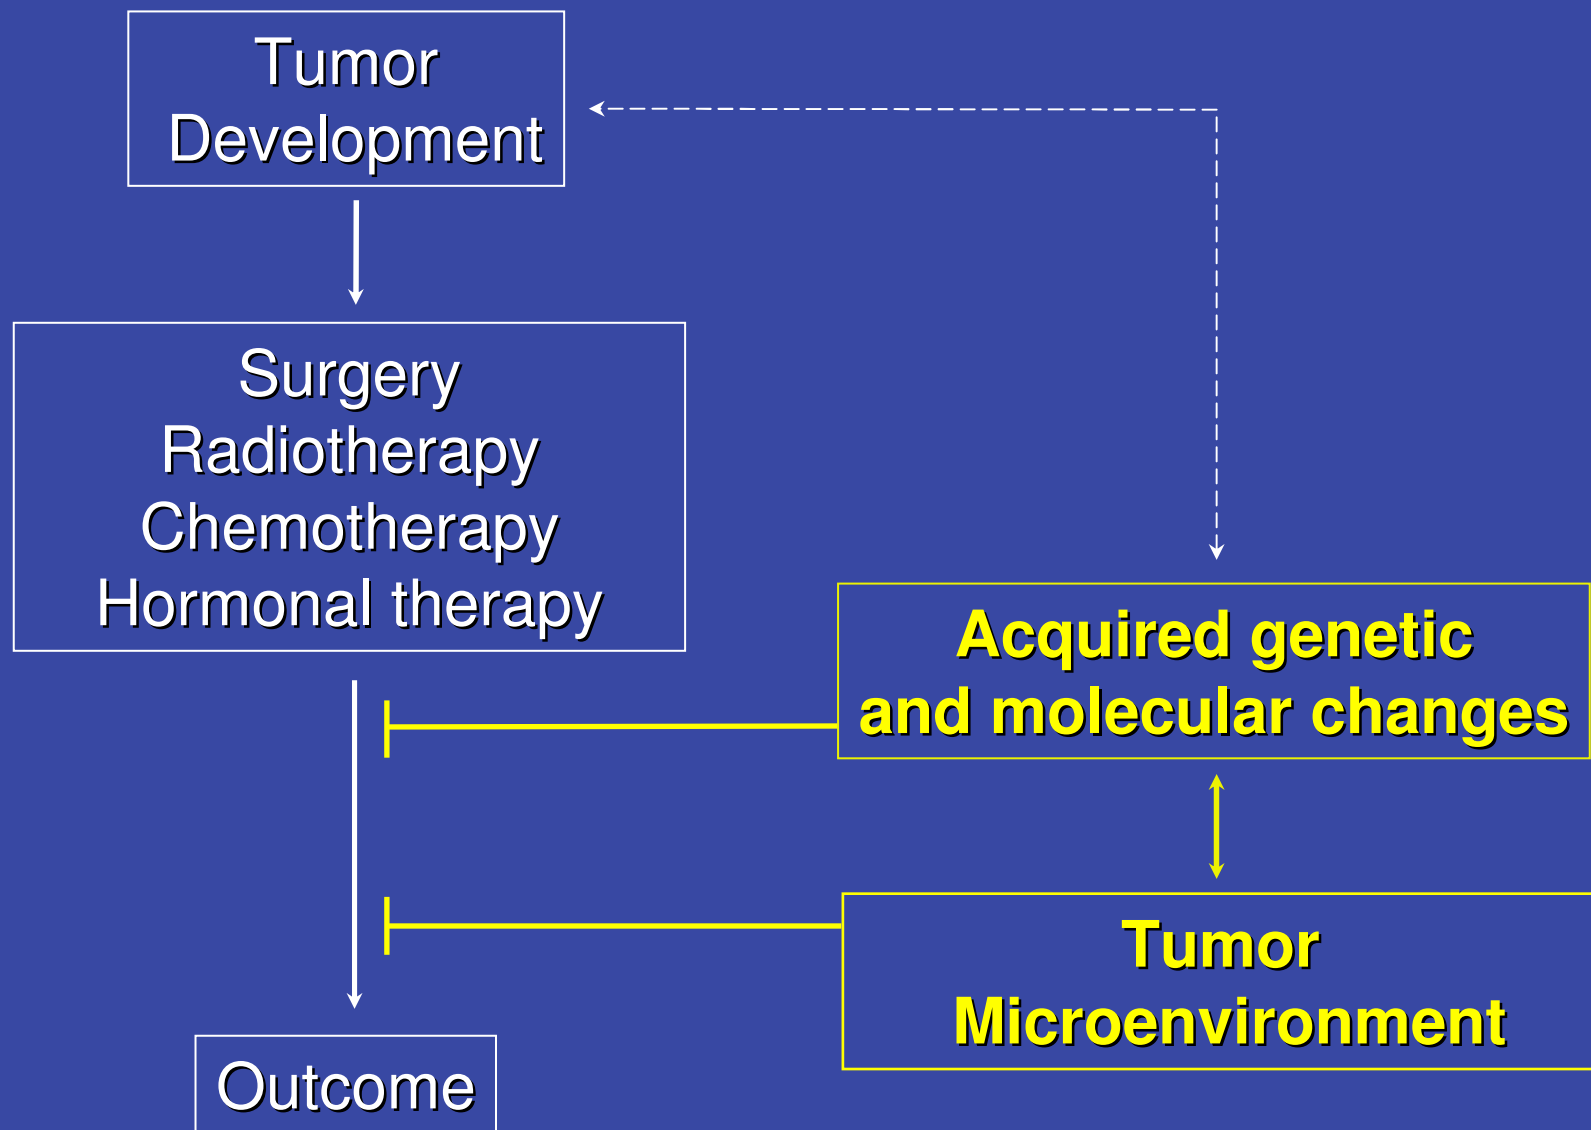

Princess Margaret Hospital

Radiotherapy Opportunities

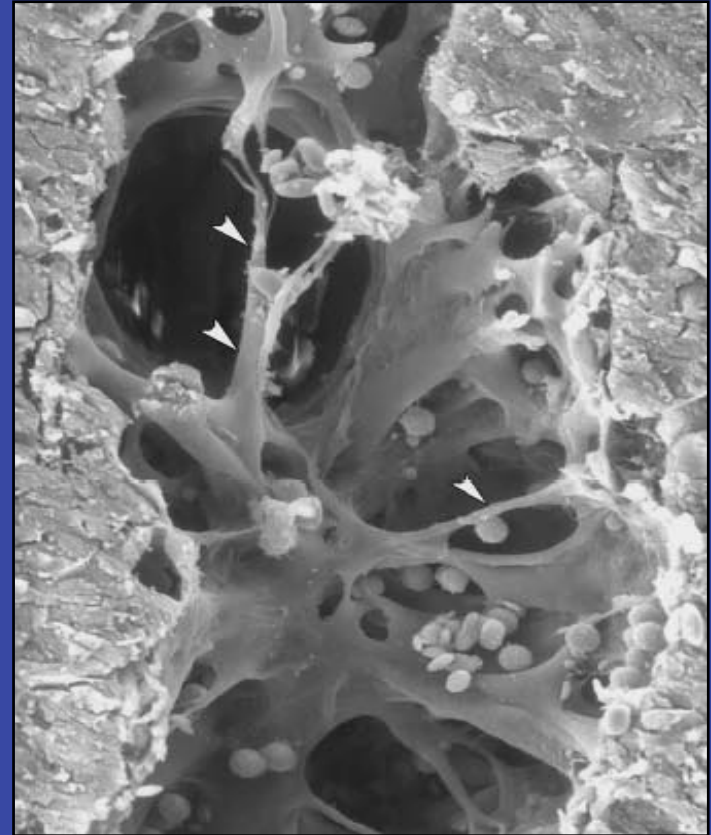

- Precision RT (IMRT)
- Spatial variability
- Temporal variability
- Adaptive RT
- Image analysis
- Biologic imaging
- RT dose modeling
- Biologic effect modeling
- Biologic RT enhancement

Tumors have...

- Chaotic vasculature
- Hyperpermeable vessels
- Abnormal lymphatics
- High interstitial protein
- High interstitial water
- Abnormal interstitium

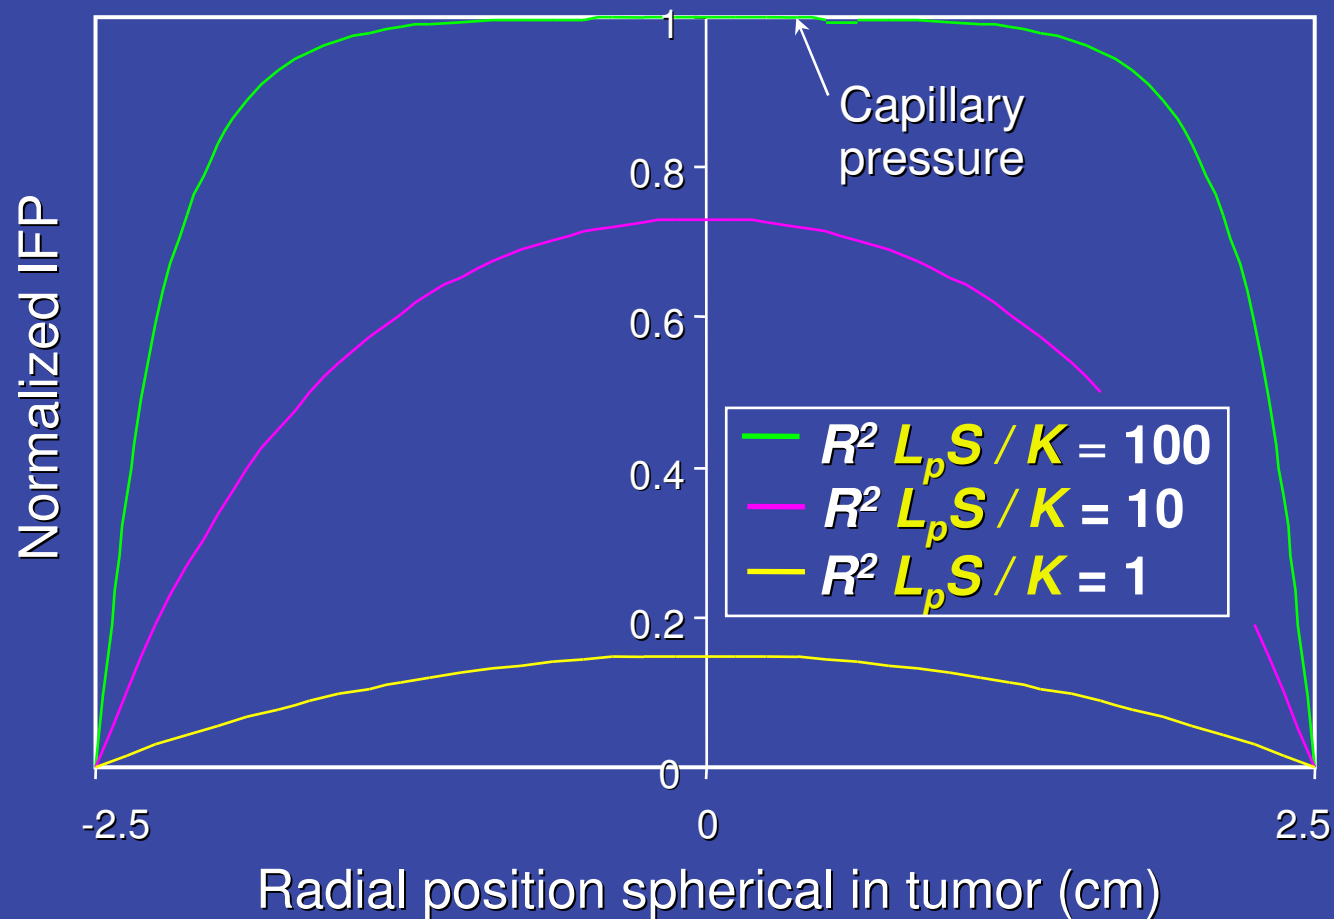

Hashizume, 2000

What Causes High IFP in Tumors?

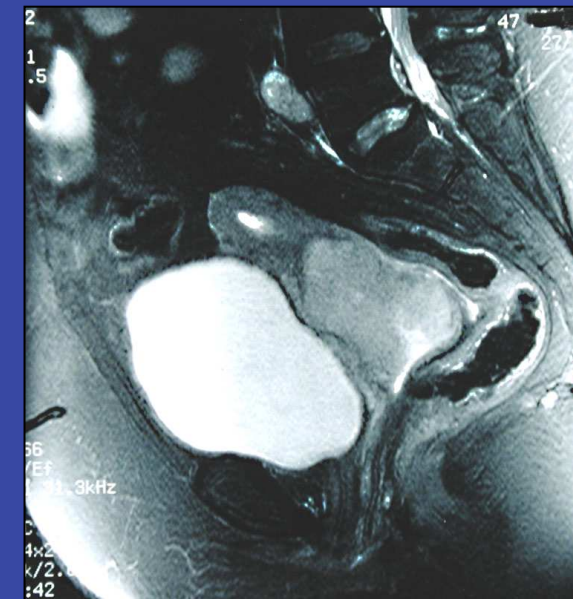

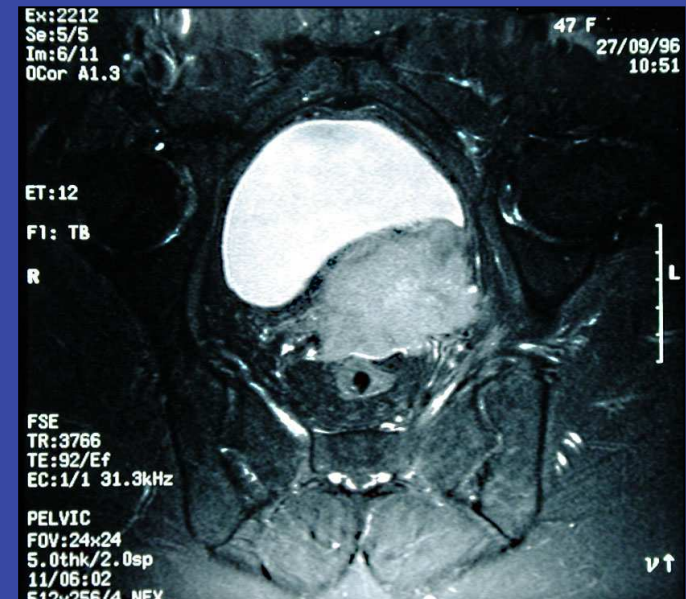

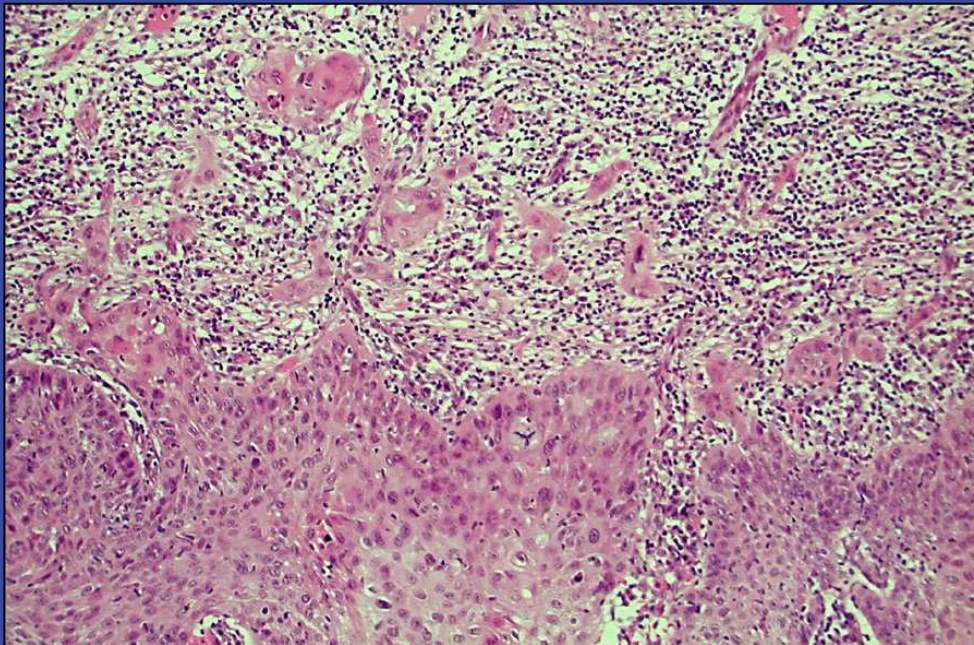

- High vascular conductivity ($L_p S$)
- Low interstitial conductivity (K)
- No lymphatics
- High geometric and viscous blood flow resistance

IFP = Capillary Pressure in Tumors

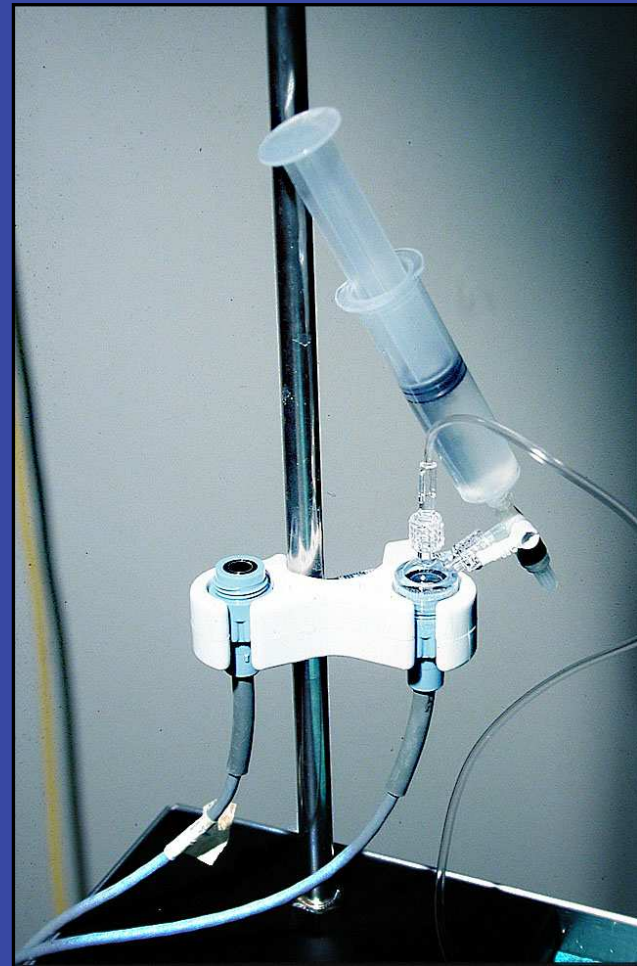

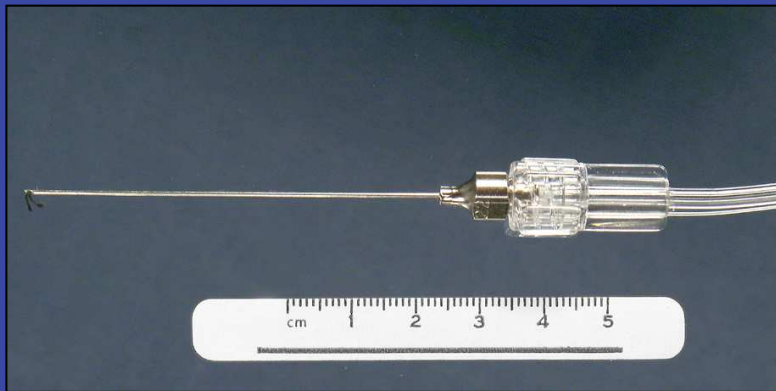

Baxter, 1989

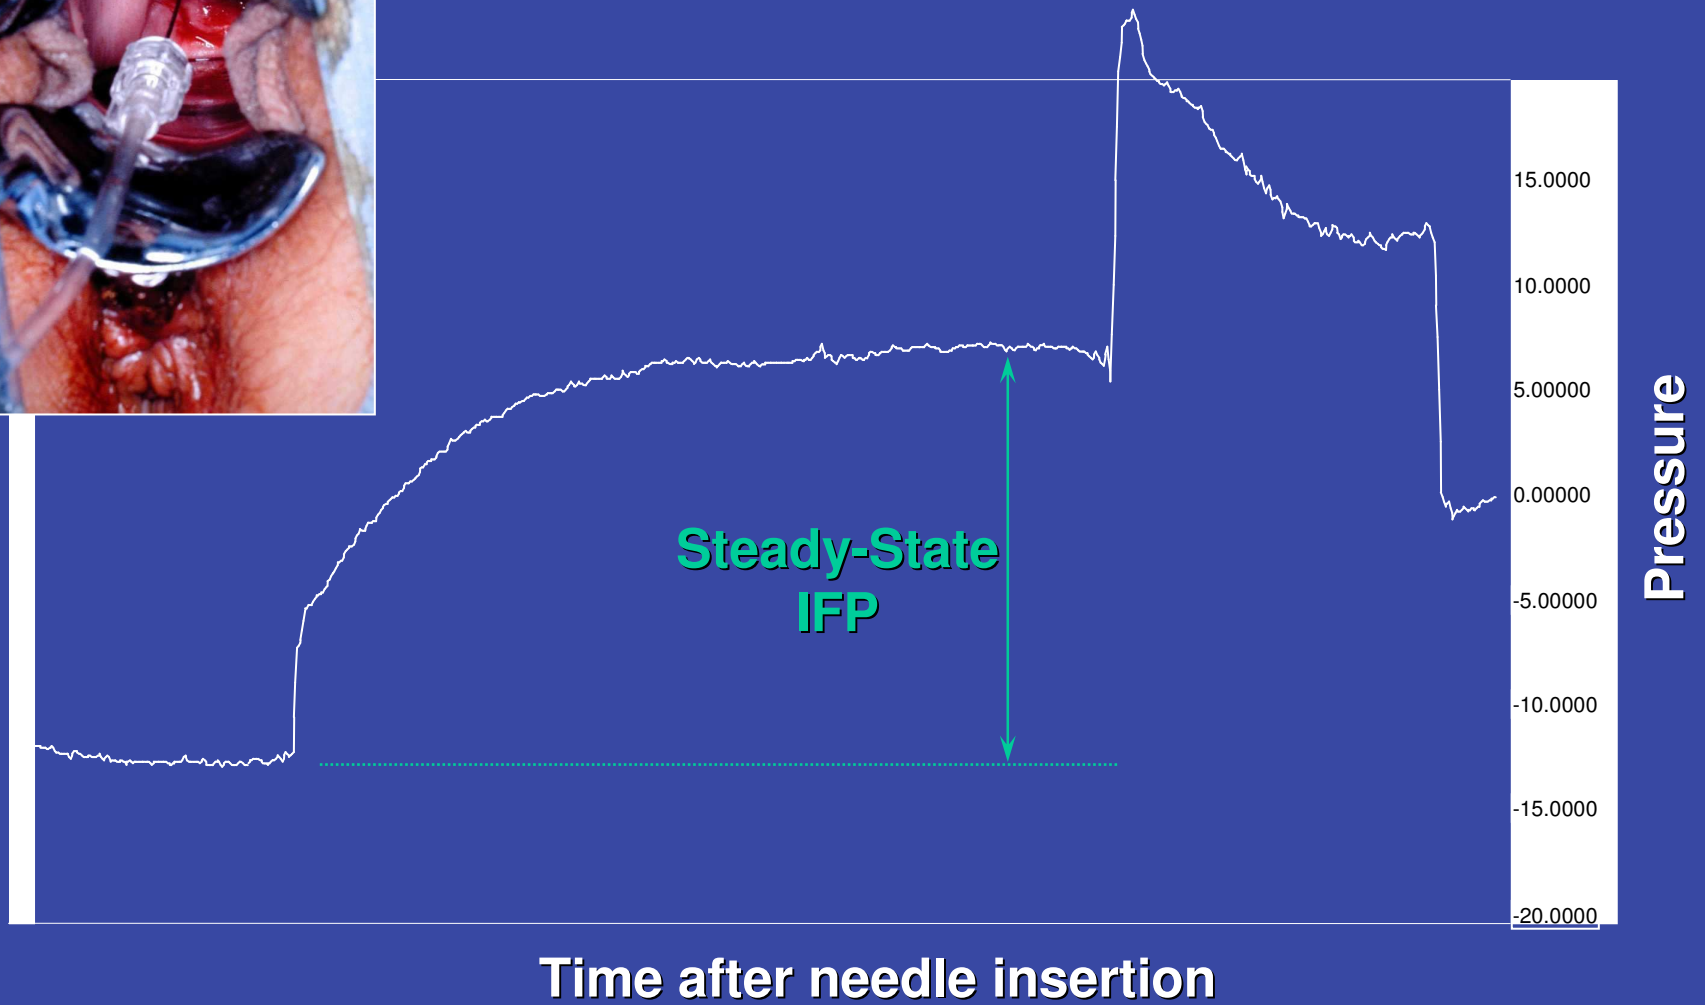

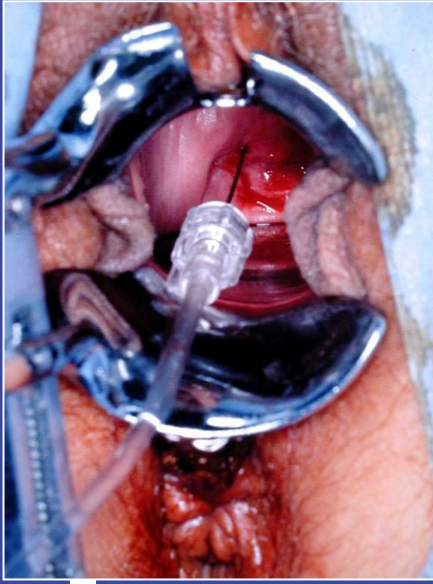

Cervix Cancer

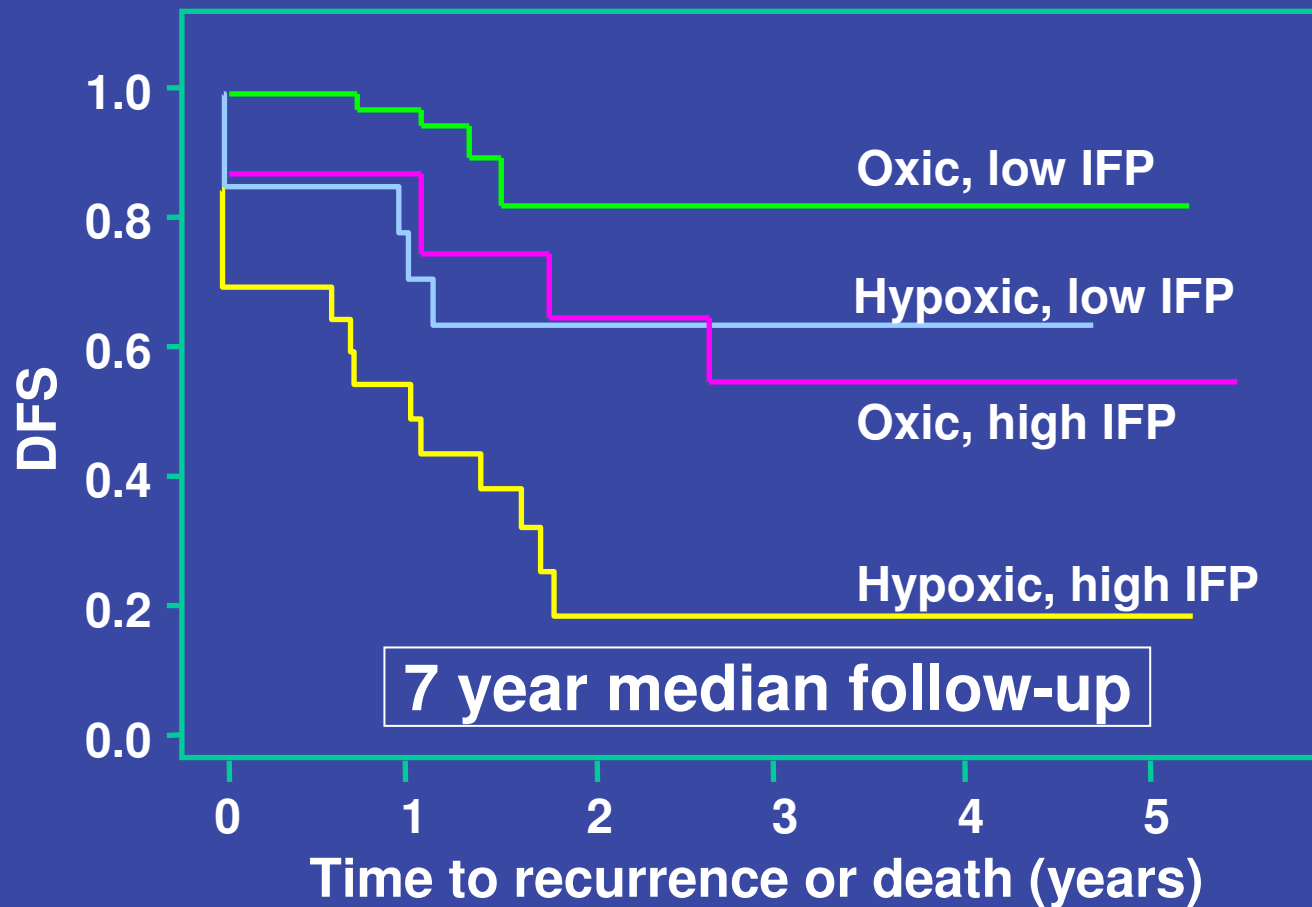

IFP Measurement

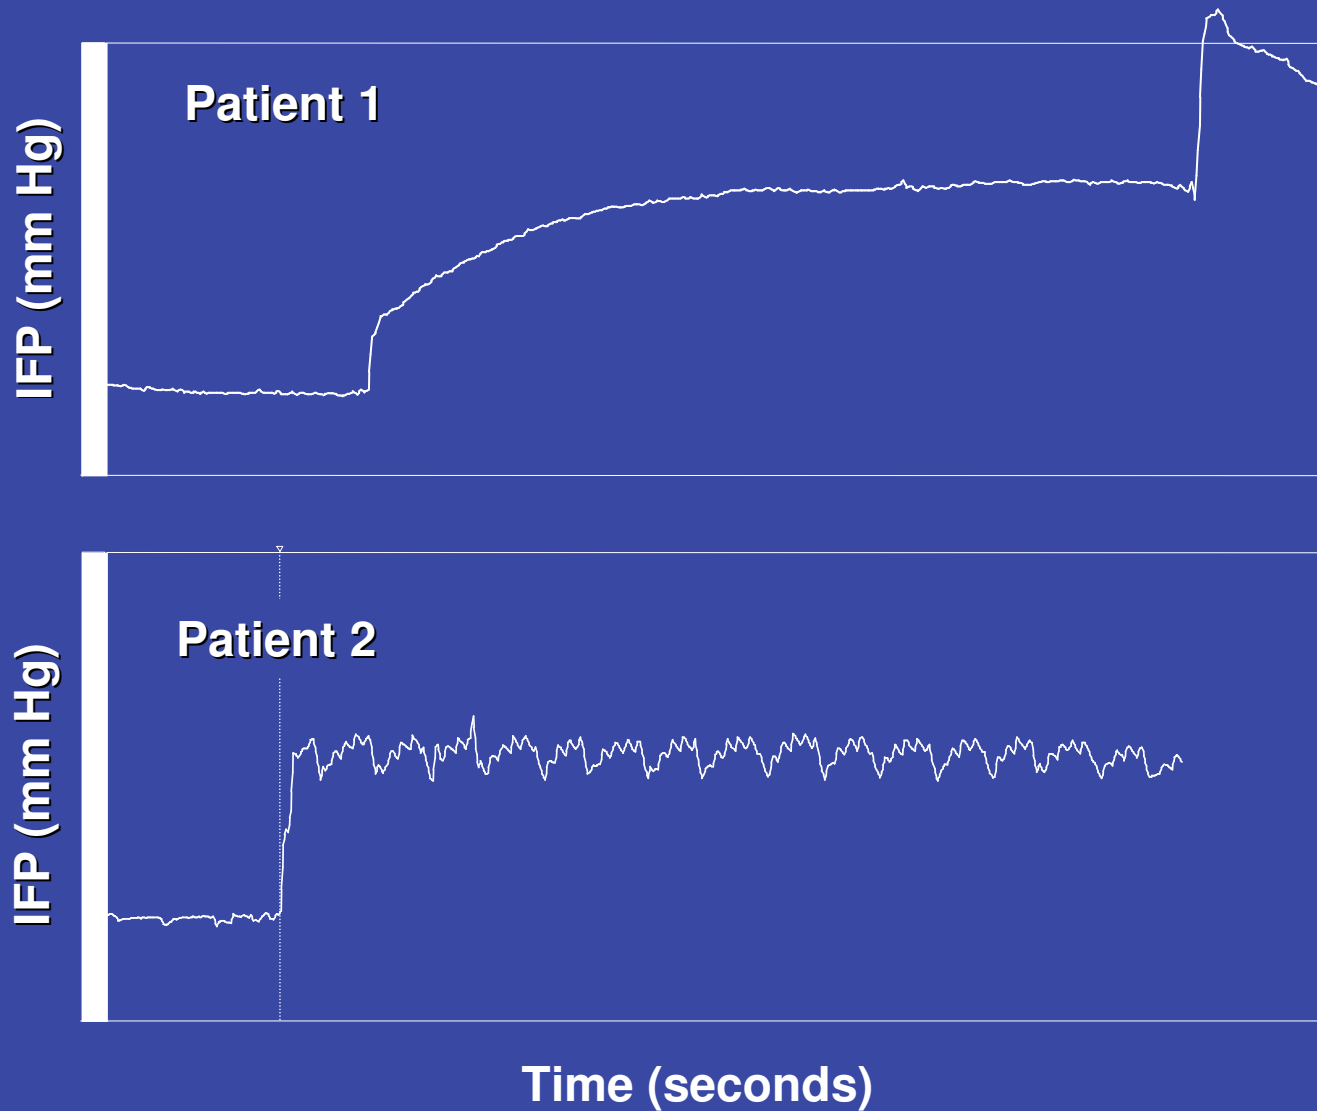

IFP Measurement

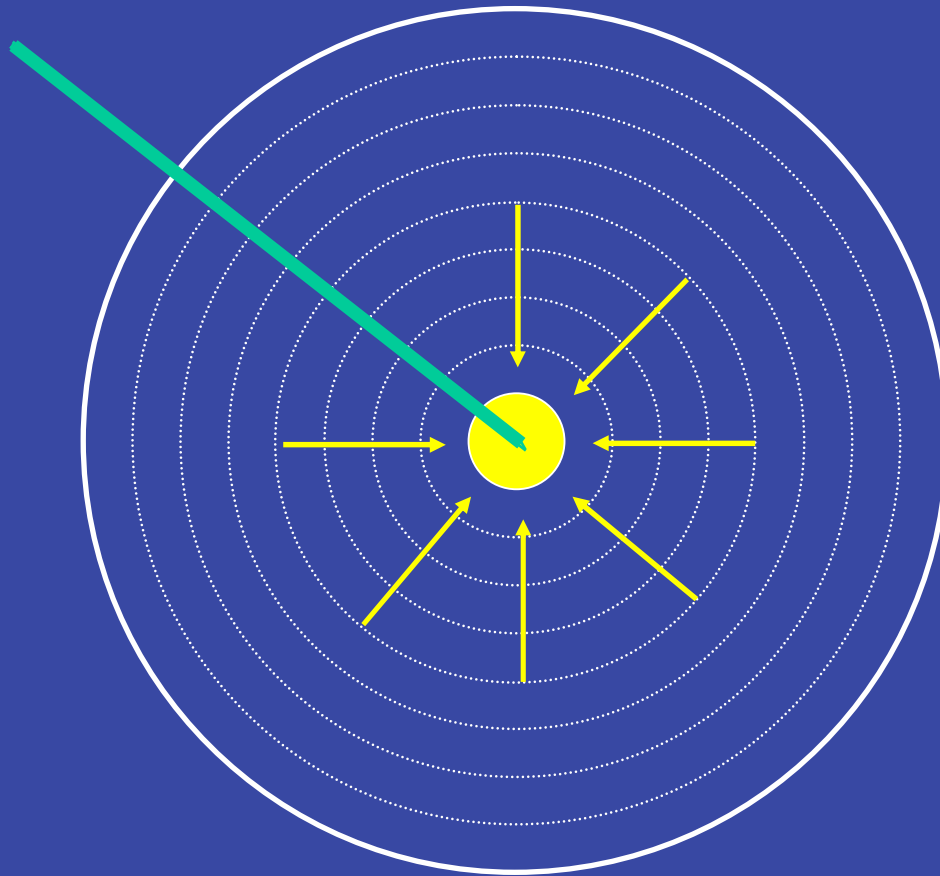

IFP: An Independent Prognostic Factor in Cervix Cancer

Time Response of IFP Measurements

Spatio-Temporal IFP Model

Spatio-Temporal IFP Model

- Homogeneous fluid model
- Transducer characteristics known
- Transient fluid flow depends on $L_p S, K, E$
- Steady-state prior to needle insertion
- Transient disruption of steady-state
- Starling's law for transmural plasma flow
- Darcy's law for interstitial flow
- Conservation of mass

Finite Difference Equations

$$RTM(r) = \frac{1}{4/3 \pi r^3 L_p S}$$

Transmural flow
resistance

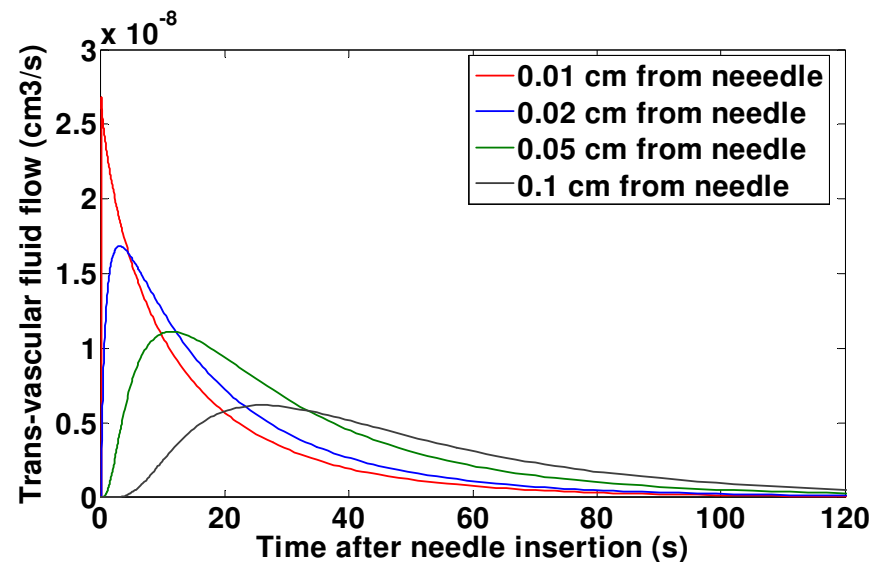

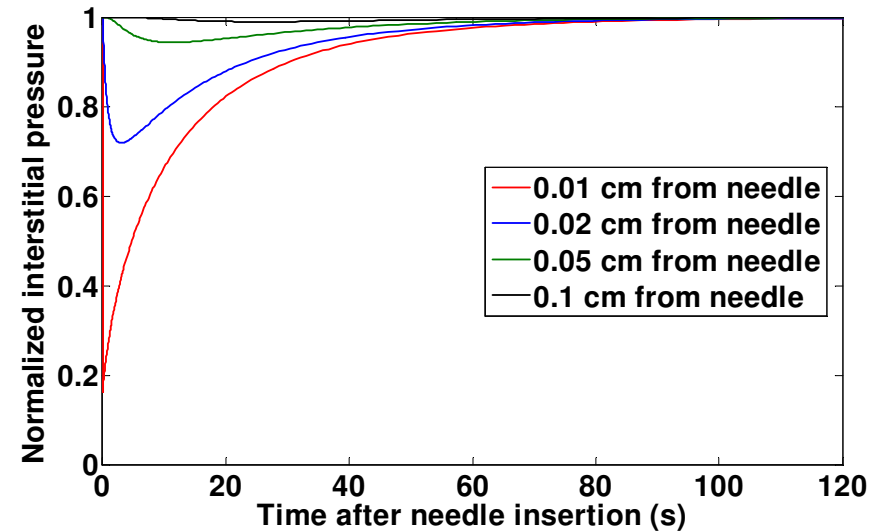

$$RI(r) = \frac{1}{4 \pi K r}$$

Interstitial flow
resistance

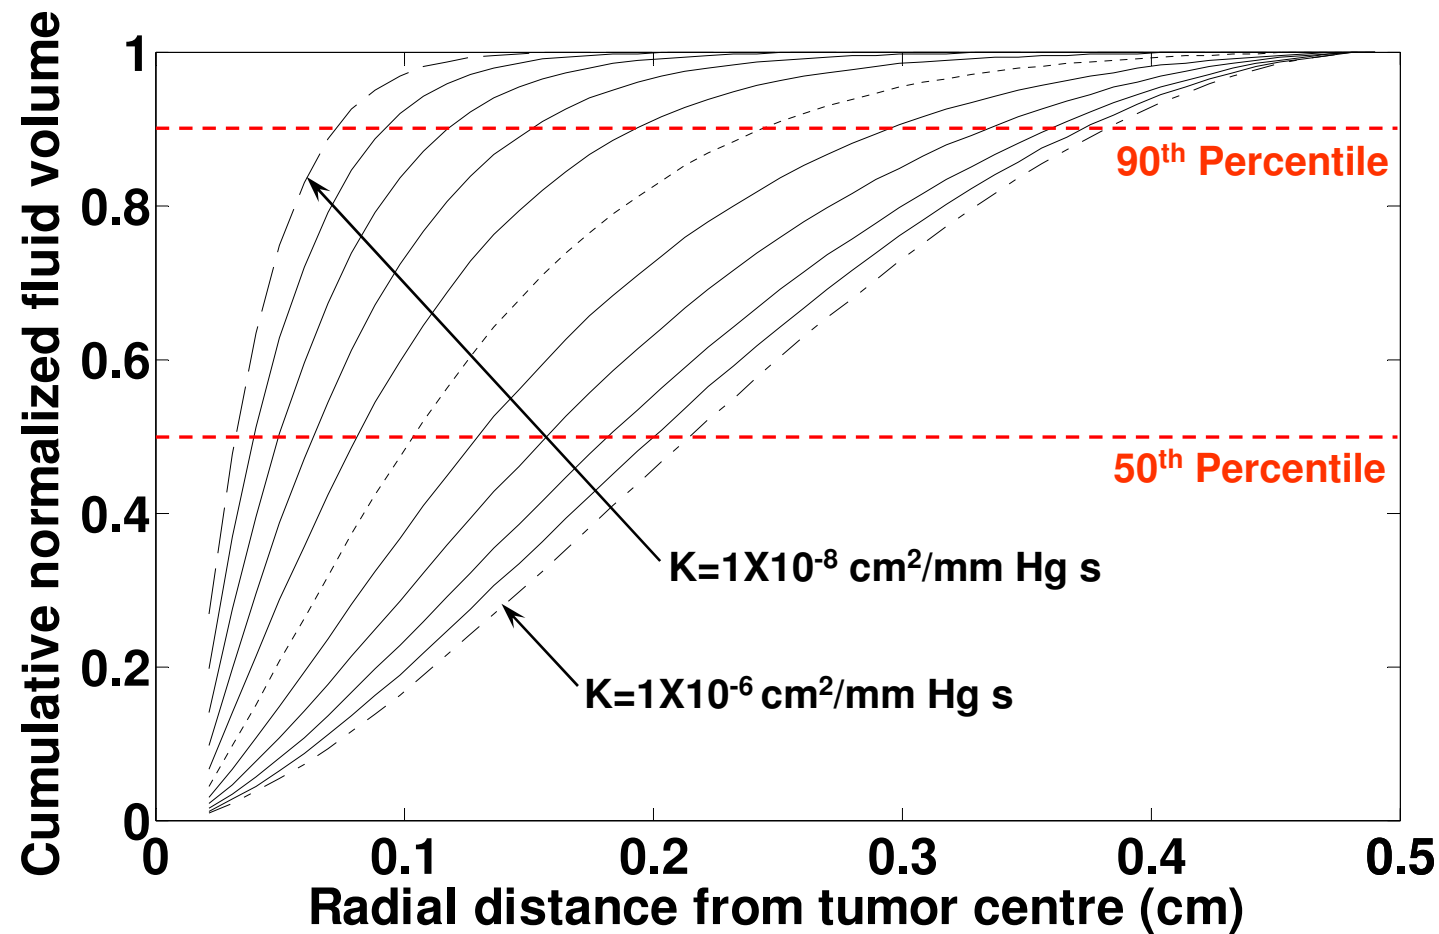

$$CI(r) = \frac{4/3 \pi r^3}{E}$$

Interstitial
Compliance

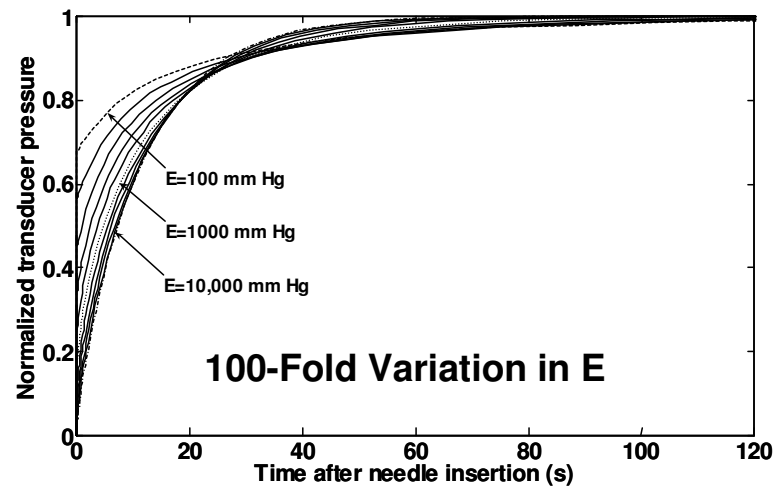

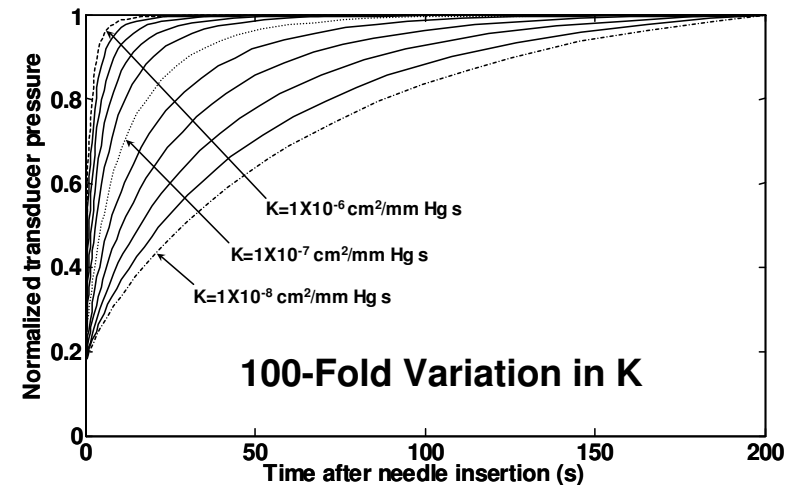

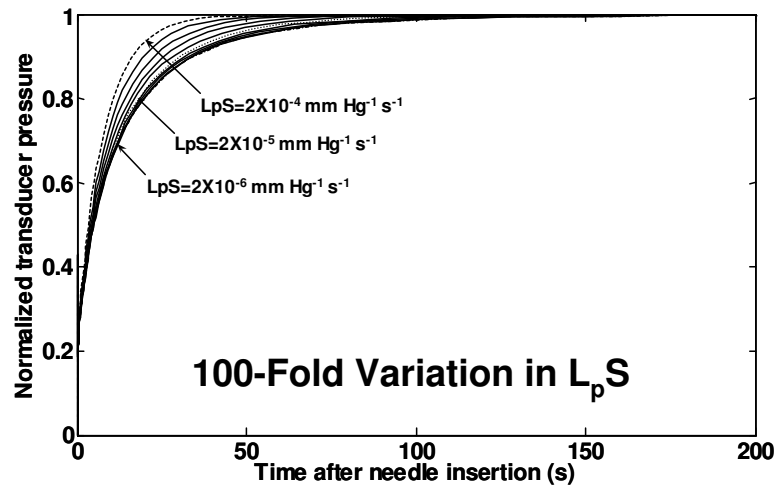

Transient Disruption of Interstitial Fluid Equilibrium

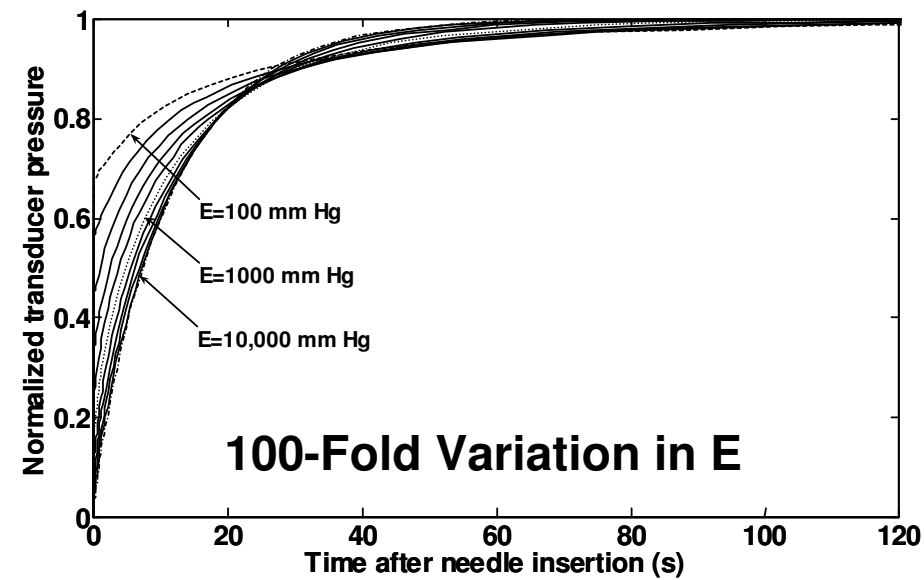

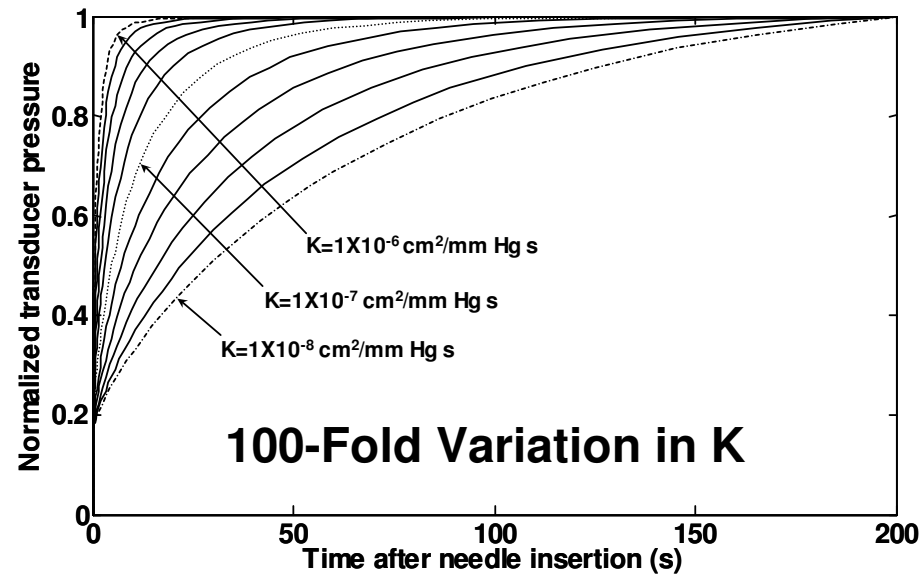

***K* Determines “Volume of Influence”**

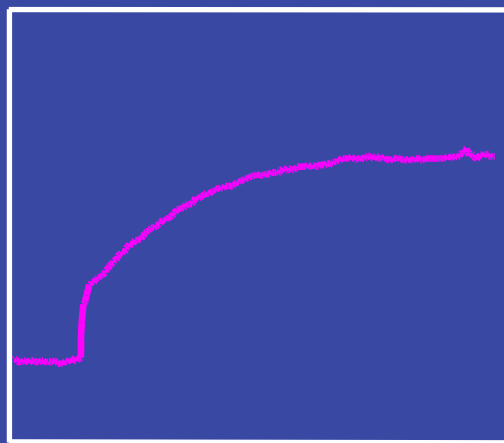

Time Response Depends on E and K

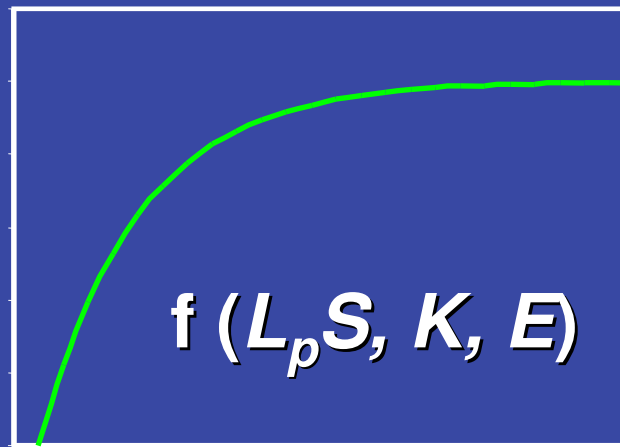

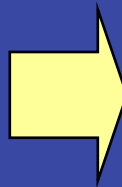

Physiologic Parameters from IFP Measurements

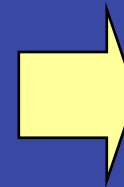

Measured IFP
Time Response

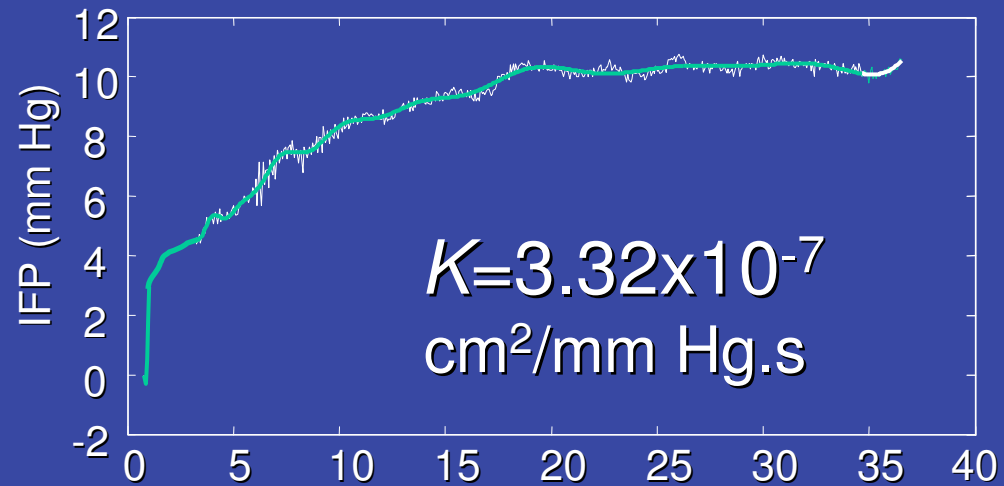

$$f(L_p S, K, E)$$

Model
Optimization

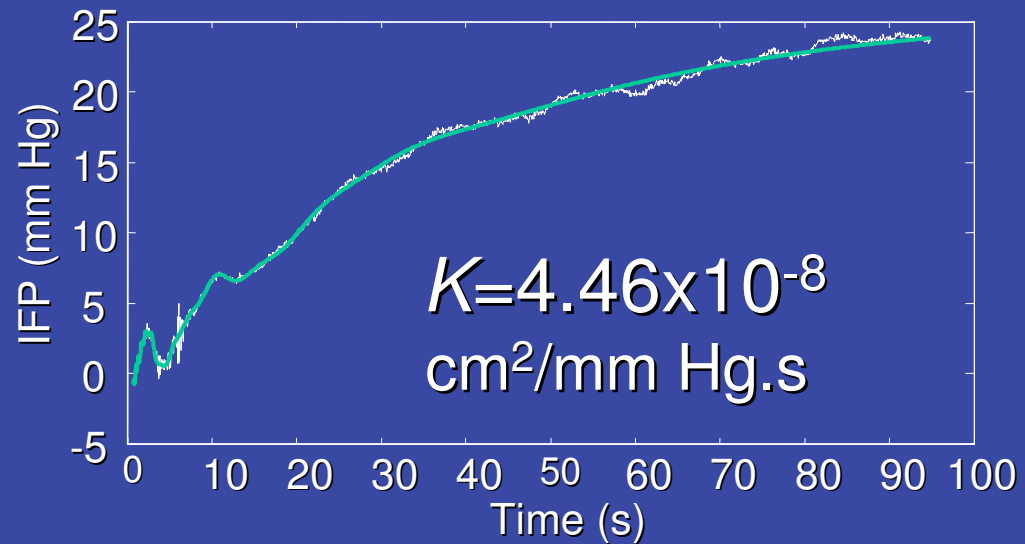

K
E

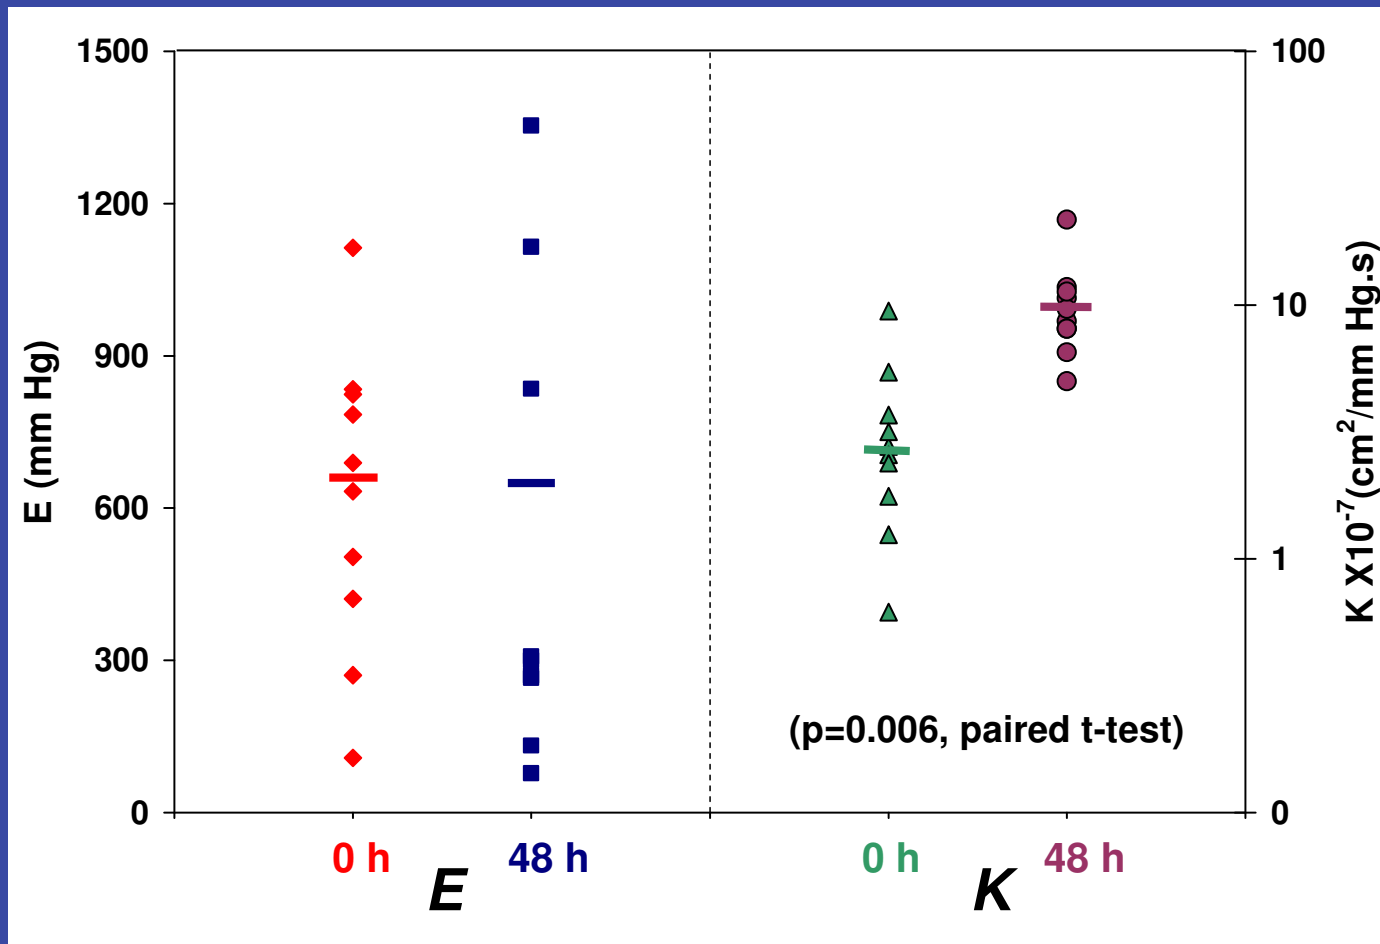

Patient 1

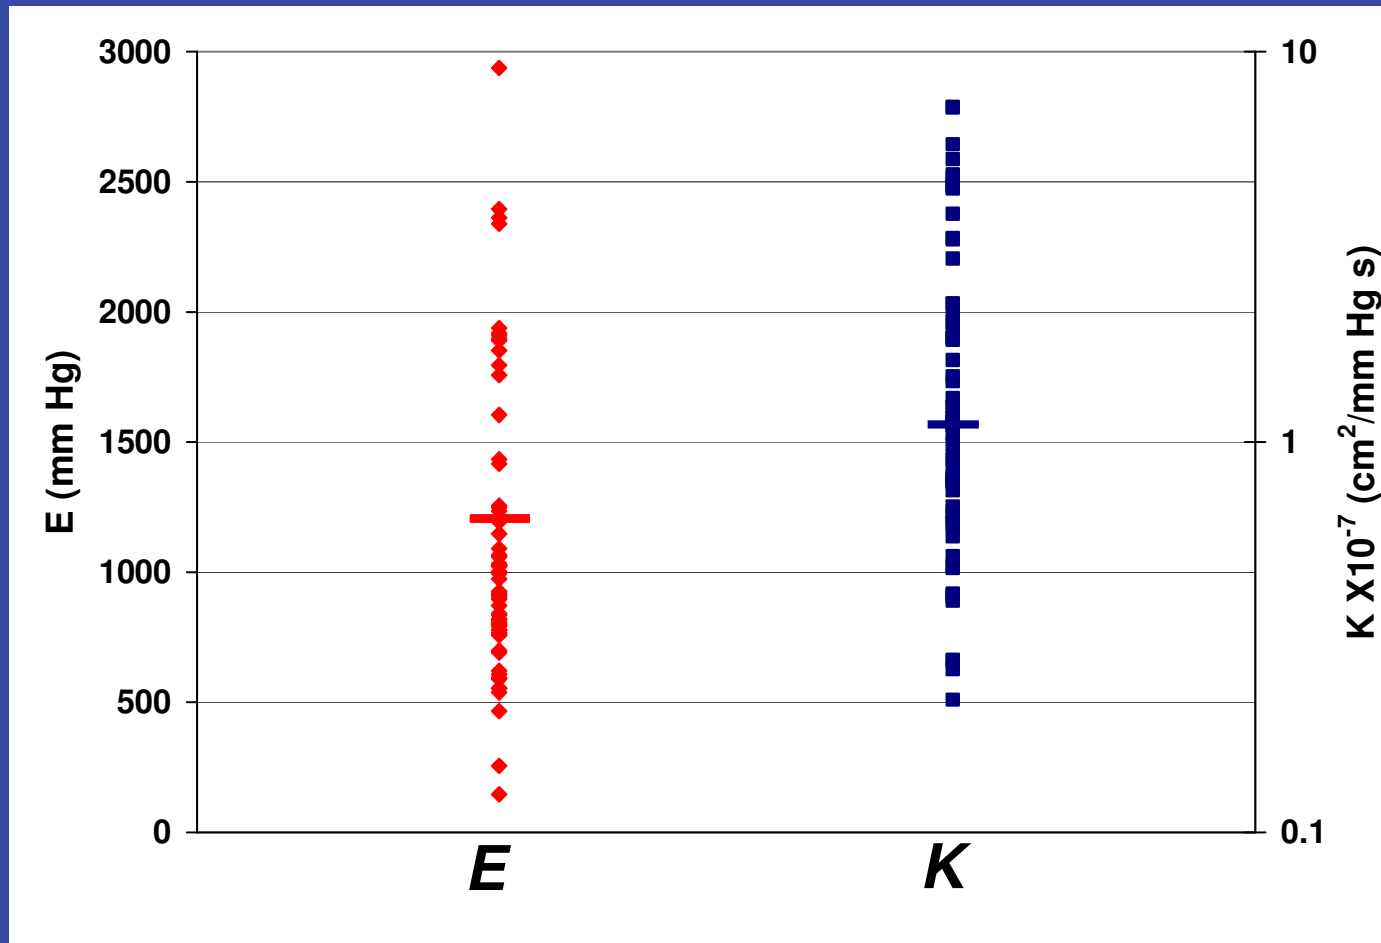

Patient 2

E and *K* in KHT-C

E and *K* in Cervix Cancer

***E* and *K* for Cervix Cancer**

209 measurements in 63 patients:

$$***E*** \quad 1218 \pm 198.1 \text{ mm Hg}$$

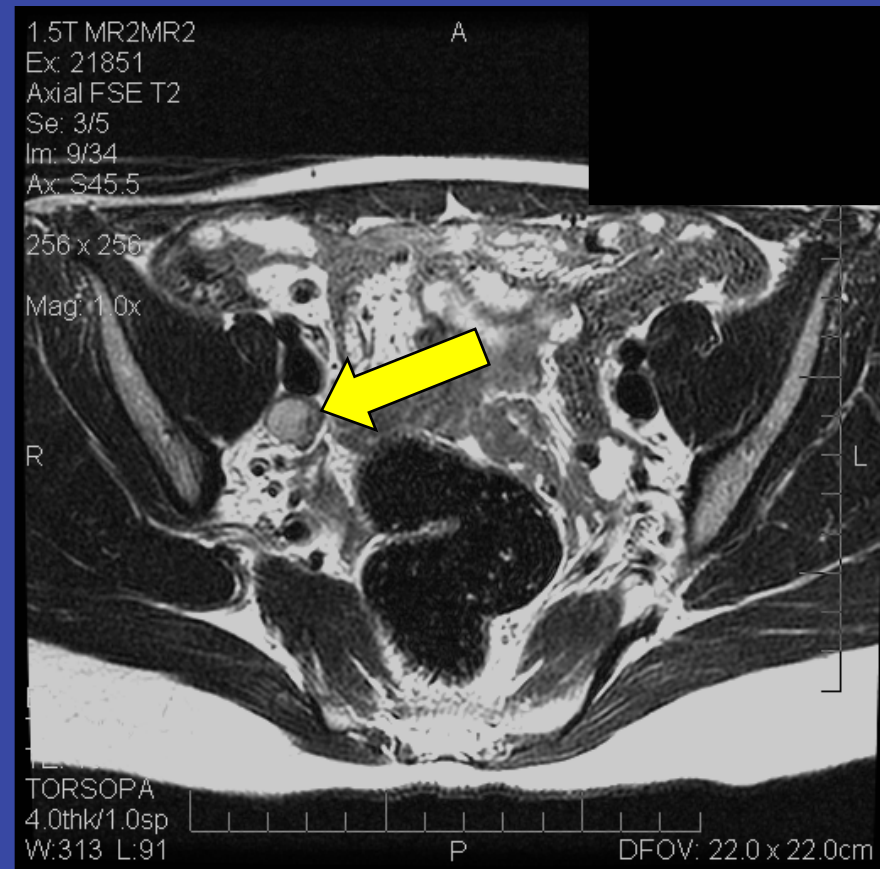

$$***K*** \quad 1.84 \times 10^{-7} \pm 4.32 \times 10^{-8} \\ \text{cm}^2/\text{mm Hg s}$$

***E* Correlates with Lymph Node Metastases?**

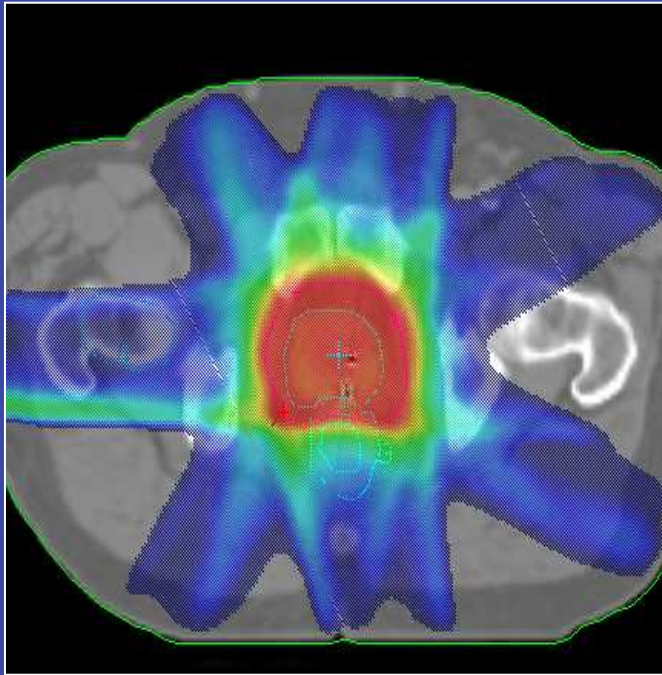

N0 1086 ± 167
mm Hg

N1 1693 ± 700
mm Hg

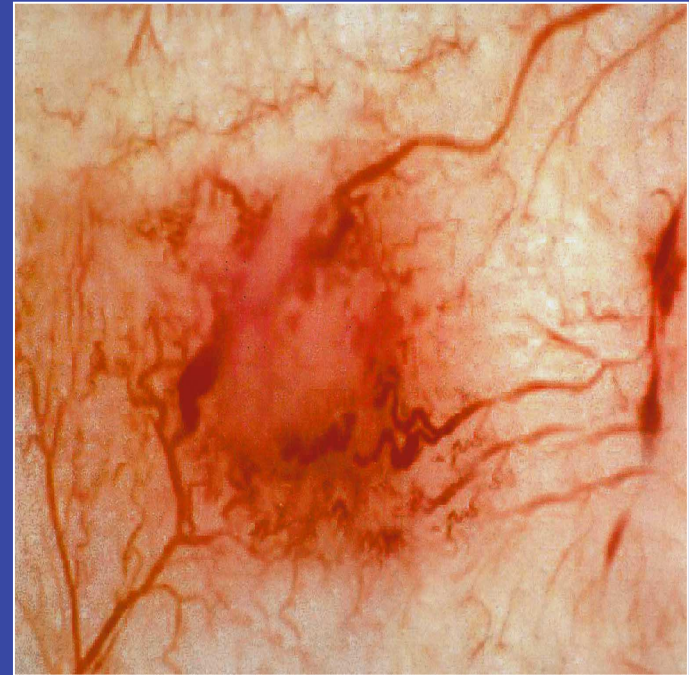

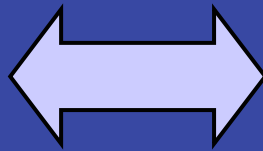

(p=0.01)

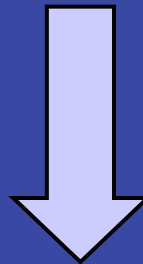

The way forward ...

Adaptive, Precision RT

Biologic Response Enhancement (BRE)

Improved Patient Outcome
