state:

$$\psi: 0, ..2^n \to \mathbb{C}$$

 $\sum x: 0, ..2^n \cdot |\psi x|^2 = 1$

・ロト ・回ト ・ヨト

University of Toronto

• Dirac-like notation:

• **x** : *n*-bit binary representation of *x*

•
$$|\mathbf{x}\rangle = \lambda i : 0, ..2^n \cdot (i = x)$$

•
$$|0\rangle = \lambda i : 0, 1 \cdot i = 0$$

•
$$|0\rangle/\sqrt{2}+|1\rangle/\sqrt{2}$$

•
$$|01\rangle = |0\rangle \otimes |1\rangle$$

•
$$|00\rangle/\sqrt{2}+|11\rangle/\sqrt{2}$$

Anya Tafliovich

operations on an *n*-qubit system ψ :

• initialisation to zero:

$$\psi := |0\rangle^{\otimes n}$$

• unitary transformation:

$$\psi := U\psi$$
, where $U^{\dagger}U = I^{n}$

Anya Tafliovich Predicative Quantum Programming University of Toronto

<ロ> <同> <同> <同> < 同>

operations on an *n*-qubit system ψ :

• measurement:

measure
$$\psi$$
 r = $|\psi r'|^2 \times (\psi' = |\mathbf{r}'\rangle) \times (x' = x) \times (y' = y) \dots$

- distribution of r' is $|\psi r'|^2$
- distribution of the quantum state is

$$\sum r' \cdot |\psi r'|^2 \times (\psi' = |\mathbf{r}'\rangle)$$

a *mixed* state

University of Toronto

Anya Tafliovich

introduction foundation algorithms non-locality communication protocols cryptographic protocols conclusion

quantum predicative programming

- a distributed (n + m)-qubit system ψ :
 - unitary transformations:

if
$$P = \psi_{0,..n} := U_P \psi_{0,..n}$$

and $Q = \psi_{n,..n+m} := U_Q \psi_{n,..n+m}$
then $P \mid |_{\psi} Q = \psi := (U_P \otimes U_Q) \psi$

measurements:

if
$$P$$
 == measure _{M_P} $\psi_{0,..n} p$
and Q == measure _{M_Q} $\psi_{n,..n+m} q$
then $P \mid\mid_{\psi} Q$ == measure _{$M_P \otimes M_Q$} ψpq

イロト イヨト イヨト

University of Toronto

Anya Tafliovich

A one-way quantum communication channel q from P to Q:

- *M_q*: infinite message script
- T_q : infinite time script
- *r_q*: read cursor
- w_q: write cursor
- n_q: number of quantum bits sent

$$\begin{array}{ll} q!\psi & = & M_q w_q = \psi \wedge T_q w_q = t \wedge \\ & w'_q = w_q + 1 \wedge n'_q = n_q + 1 \wedge \mathsf{var}'_P := \mathsf{var}_P \backslash \psi \\ q?\psi & = & \psi' = M_q r_q \wedge r'_q = r_q + 1 \wedge \mathsf{var}'_Q := \mathsf{var}_Q, \psi \end{array}$$

University of Toronto

Anya Tafliovich

Deutsch's algorithm

Specification:

$$S = x' = f0 \oplus f1 \wedge t' = t + 1$$

for $f: 0, 1 \rightarrow 0, 1$.

Program:

$$P = \psi := |0\rangle ; \ \psi := H\psi ; \ \psi := U_f \psi ;$$

$$\psi := H\psi ; \ \text{measure } \psi \times$$

・ロト ・ 日 ・ ・ ヨ ・ ・

<□ > < □ > < □ > < ■ > < ≧ > < ≧ > < ≧ > ≧ の Q () University of Toronto

- Alice and Bob share $\phi_{12} = (|00\rangle + |11\rangle)/\sqrt{2}$
- Alice wants to teleport ϕ_0
- Alice performs local operations on ϕ_{01} , measures them, and sends results to Bob
- Bob performs local operations on ϕ_2 , depending on the two classical bits received

• as a result,
$$\phi_2' = \phi_0$$

Specification:

$$\begin{split} S = & \phi_{01} : \mathbf{var}_{Alice} \land \phi_2 : \mathbf{var}_{Bob} \land \\ & \phi_{0,1,2} = (\alpha \times |0\rangle + \beta \times |1\rangle) \otimes (|00\rangle + |11\rangle) / \sqrt{2} \\ & \Rightarrow (\phi_2' = \alpha \times |0\rangle + \beta \times |1\rangle) \land n_c' = n_c + 2 \land n_q' = n_q \end{split}$$
