ABSTRACTS 1.2

## M. G. NADKARNI <br> University of Mumbai

When is

$$
f\left(x_{1}, x_{2}, \cdots, x_{n}\right)=u_{1}\left(x_{1}\right)+u_{2}\left(x_{2}\right)+\cdots+u_{n}\left(x_{n}\right) ?
$$

We will discuss condition on a non-empty subset $S \subset X_{1} \times X_{2} \times \cdots \times X_{n}$ under which every real valued function $f$ on $S$ is of the form $\sum_{k=1}^{n} u_{k}\left(x_{k}\right)$, as also the connection with dynamics and analysis.
