

What counts as math?

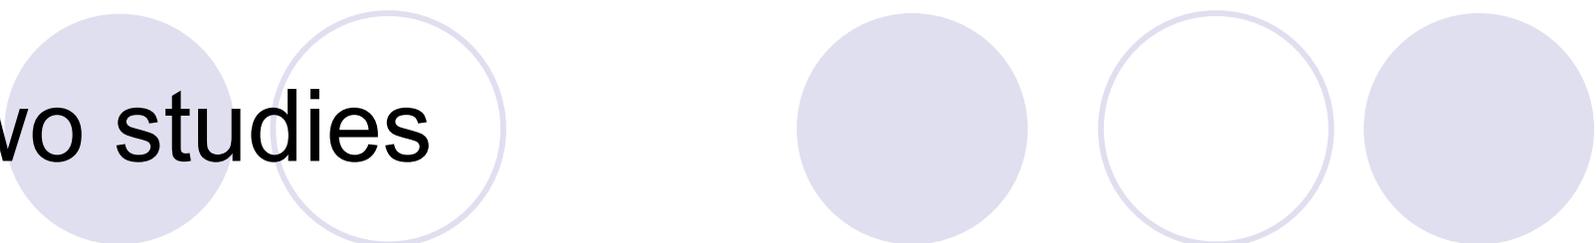

Stories from families and from
popular media

Indigo Esmonde

OISE, U of T

January 19, 2008

Fields Institute Mathematics Education Forum

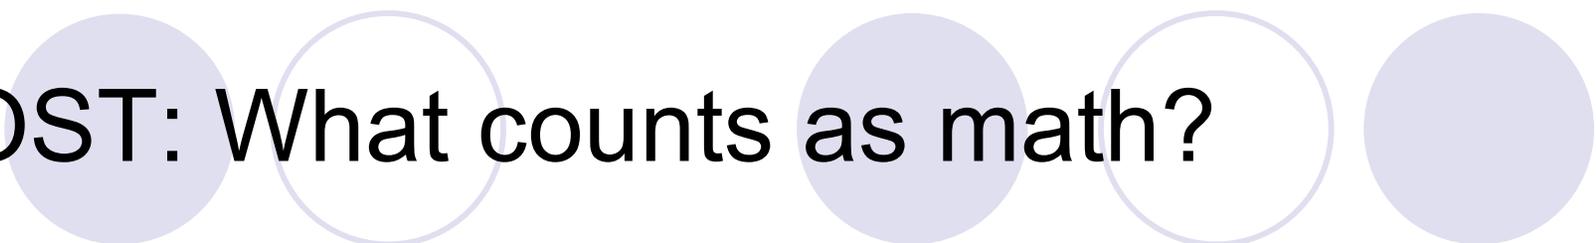

Two studies

- Family Math Project

- Stanford University: Roy Pea, Shelley Goldman, Angela Booker, Lee Martin, Kristen Pilner Blair, Osvaldo Jiminez
- NSF funded to LIFE Center

- NUMB3RS study

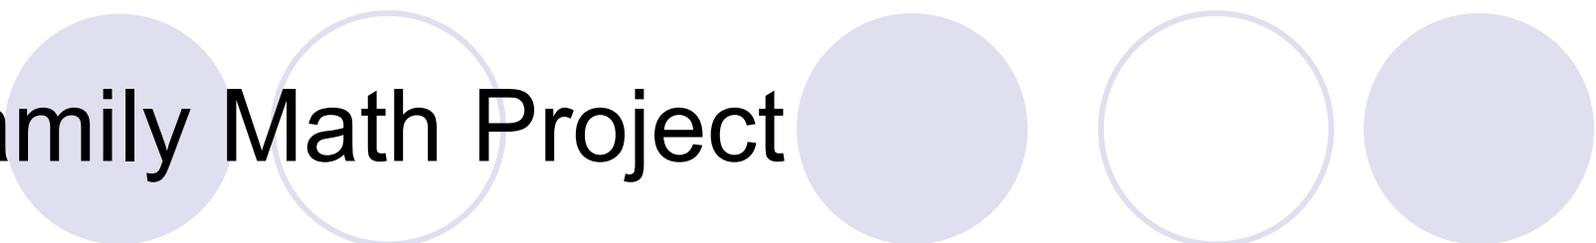

- University of Washington: Reed Stevens
- NSF funded to LOST dissemination project

LOST: What counts as math?

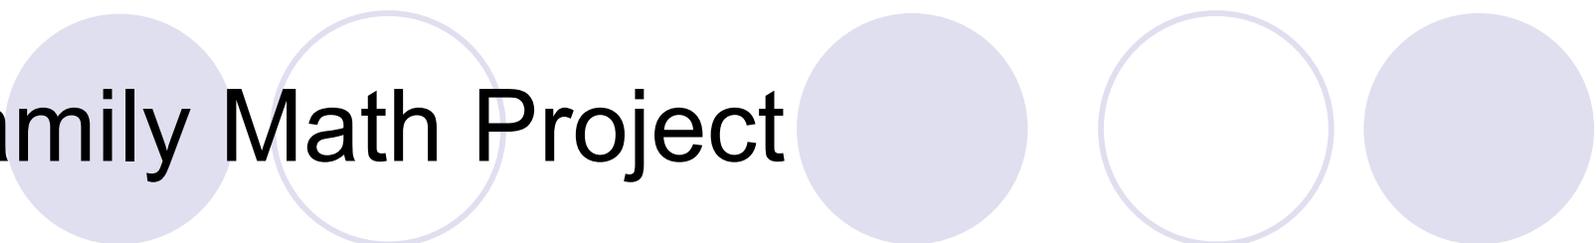

- 'What counts' is determined through interaction, in practice
- Studies of various settings
 - Families
 - Popular media: NUMB3RS

Family Math Project

- <http://familymath.stanford.edu/>
- Interviews with families with middle school age children
 - 'Math in a Minute' stories
 - Family engagement with various types of activities (e.g., home improvement, cooking)
 - Cell phone task

Family Math Project

- <http://familymath.stanford.edu/>
- Interviews with families with middle school age children
 - 'Math in a Minute' stories
 - Family engagement with various types of activities (e.g., home improvement, cooking)
 - Cell phone task

Math in a Minute stories

- “Tell us a story about something that happened in your life, involving mathematics”
 - Interviewer gives an example
 - Each family member encouraged to give a story
 - Stories often co-told, related to one another in cycles
 - $N \sim 80$

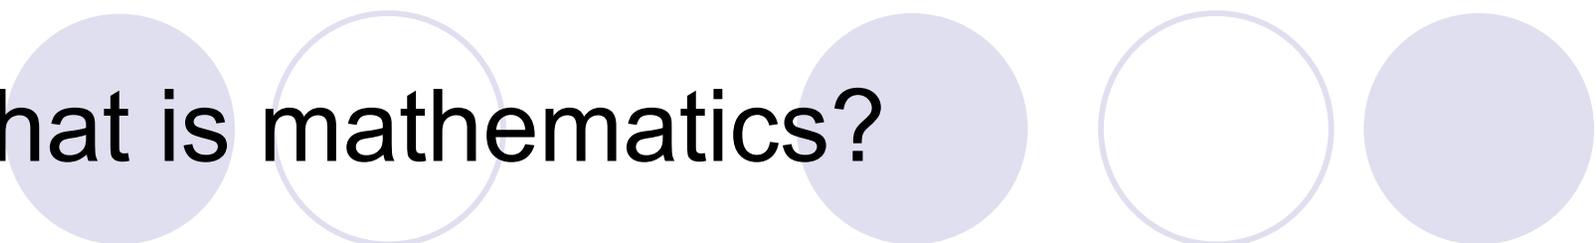

Two types of stories

- School stories
- Home/work stories

School stories

- Adults and children tell them
- Positive
 - Success on tests, good grades, etc
 - Solving a difficult problem
- Negative
 - “I was never good at math”
 - Bad grades, confusion

What is mathematics?

- Mostly: School problems
 - Math for math's sake
- Sometimes: Mathematical problems encountered when doing other things
 - E.g., spending an hour making a poster in the shape of a pyramid

A decorative graphic at the top of the slide consists of two rows of circles. The top row has three circles: a solid light purple circle on the left, a white circle with a light purple outline in the middle, and a solid light purple circle on the right. The bottom row has three solid light purple circles. The text 'Who am I?' is positioned to the left of the first circle in the top row.

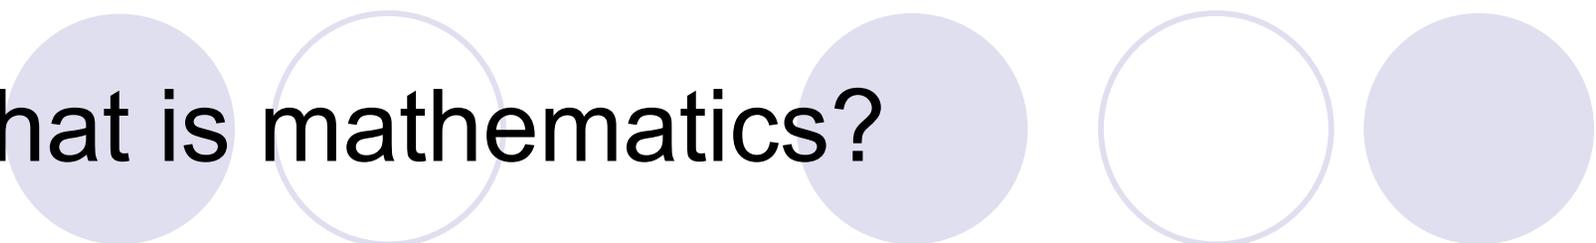

Who am I?

- Success usually evaluated by someone else (e.g., teacher)
- Success at math becomes a facet of one's identity
 - 'good at math,' or 'bad at math'
 - Sometimes from one pivotal experience

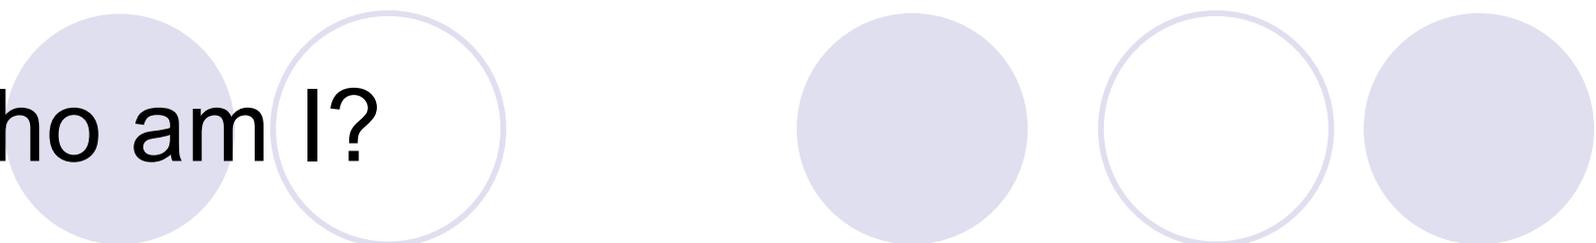

Home stories

- Adults and children tell them (adults often prompt children)
- Overwhelmingly positive
 - Difficult problems encountered in the course of activity
 - Routine mathematical tasks

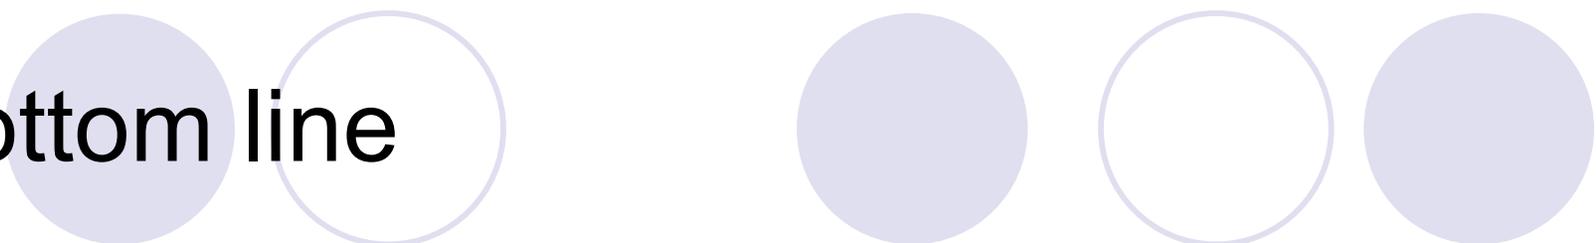

What is mathematics?

- A way to make responsible decisions
 - Personal responsibility: budgeting, spending money responsibility
 - Social responsibility: donating to charity, teaching mathematics to young people
- A necessary part of getting things done
 - Home improvement, shopping, cooking, running a business, decorating, playing games

Who am I?

- Socially and personally responsible
- Success usually evaluated by outcome
 - If the curtains hang well and look good, I did the math right.
 - If my family is provided for, I've done a good budget.
- Competent

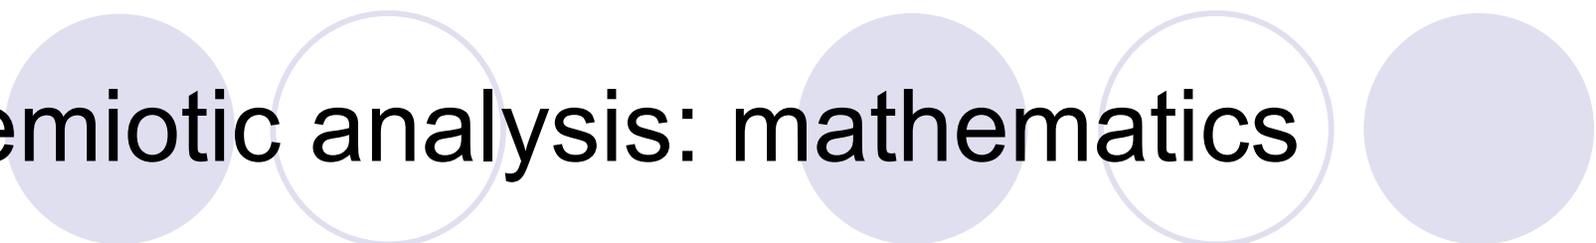

Bottom line

- What counts as math?
 - Almost all participants could contribute stories
 - Involved in many facets of daily life
 - Home:
 - Competence (even with difficult problems)
 - Problem-solving distributed between family members, available resources, etc.
 - Controversial among some 'home' stories

What counts as math on NUMB3RS?

- 'We all use math every day'
 - What is the math?
 - Who does it?
- Season 2
 - Semiotic analysis of 'mathematics': 24 episodes
 - Small interview study of one episode

Semiotic analysis: mathematics

- Most often refers to work of professional mathematicians
 - 'math geeks'
- Not applied to the work of FBI agents
 - Problem solving, deductive reasoning, social network theory, probabilistic reasoning...

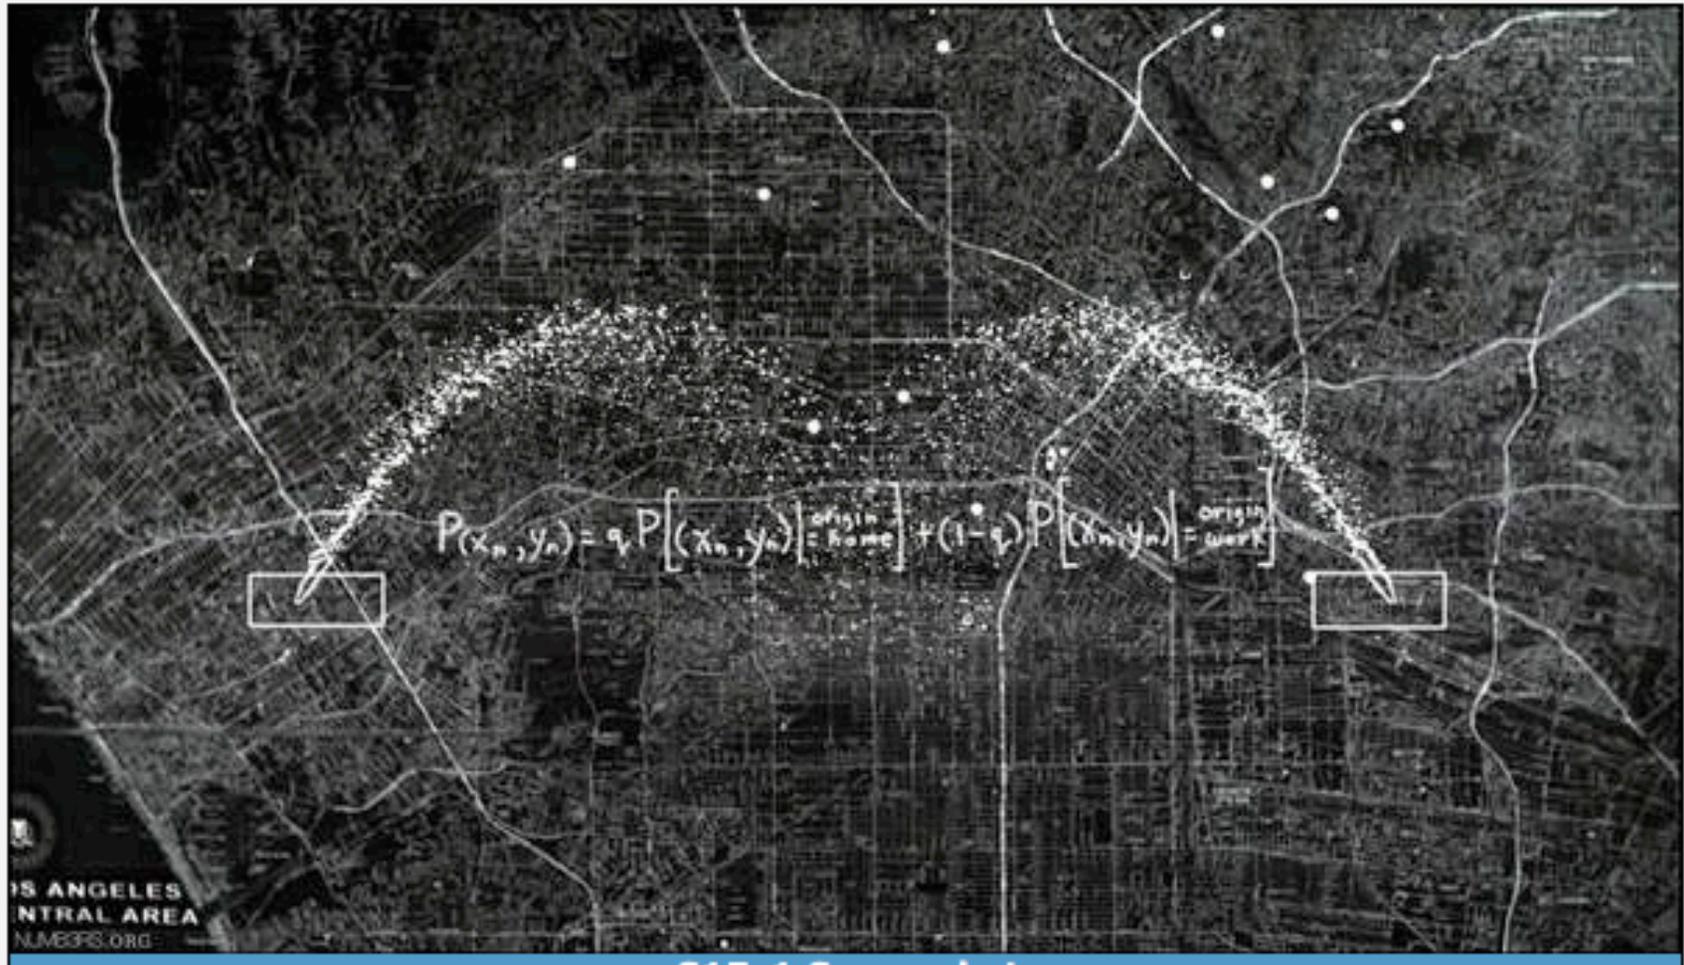

A decorative graphic at the top of the slide consists of two groups of circles. The first group on the left has a solid light purple circle on the left and an outlined light purple circle on the right. The second group on the right has a solid light purple circle on the left, an outlined light purple circle in the middle, and a solid light purple circle on the right.

Interviews

- Watch full episode
 - Pause when you see mathematics
 - Discuss how participant identified it as mathematics
- N = 3 (so far)

Who is the 'we' who uses math every day?

- Charlie
- And his colleagues (astrophysicists, computer scientists, mathematicians)
- Evidence:
 - Mathematical explanations
 - 'They were mathematicians and they said something I didn't understand so I assumed it was math'
 - On-screen images suggesting mathematics

Examples that are *not* identified as math

- FBI agents

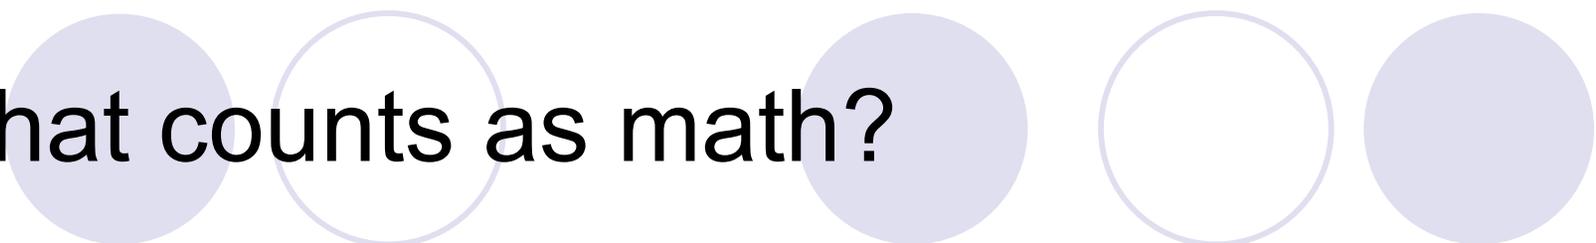

- Looking for a pattern in the dates of crimes
- Using a computer program to match bullets

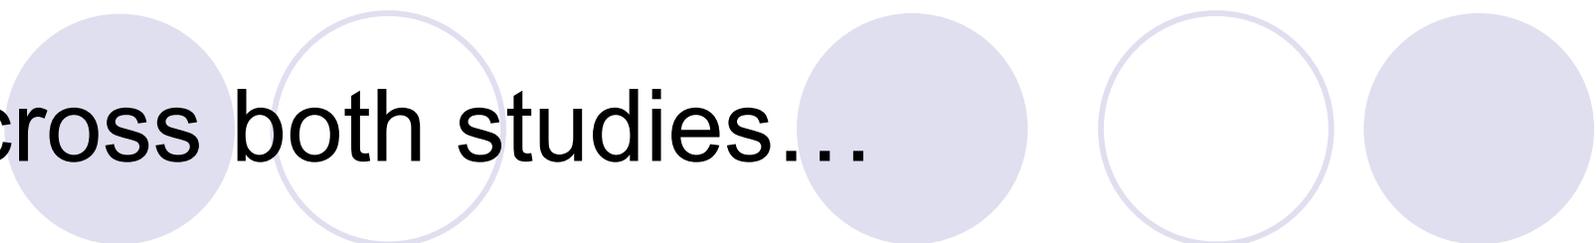

What is the math that 'we' do every day?

- Complex
- Filled with jargon
- Above the head of most intelligent people

What counts as math?

- Very narrow definition
 - Academic
 - Complex
 - Underlies everyday events, but not intelligible to most people
- Belies the tag line 'we all use math every day'

Across both studies...

What counts as math is

- Contingently identified
- Dependent on details of practice
- Malleable, changeable

But influenced by...

- Narrow academic/school definitions
- Representations in popular media, books, etc.
