

New journal *Quantum Economics and Finance*

QEF aims to become the premier research forum for presenting and debating results from the interface between quantum methods and economics

The journal will cover a variety of areas of interest such as

- quantum computational/algorithmic aspects in finance
- applications of the quantum formalism to derivative pricing and financial economics
- economic decision making

QEF will feature

- original research from both academia and practice
- work drawing on other branches of quantum social science, such as quantum cognition or quantum game theory
- papers reporting on how techniques from quantum computing are changing the way we think about and model the financial system
