

# The lattice of $C^*$ -covers of an operator algebra

Adam Humeniuk  
MacEwan University

May 23, 2023

# Overview

## 1 Nonselfadjoint operator algebras

## 2 $C^*$ -covers

- $C^*$ -covers and envelopes
- Meanings of “same  $C^*$ -covers”

## 3 Future Directions

# Non-selfadjoint operator algebras

## Reminder.

A  $C^*$ -algebra is a subspace of  $B(H)$  that is

- closed to multiplication,
- $*$ -closed
- and norm-closed.

# Non-selfadjoint operator algebras

## Reminder.

A  $C^*$ -algebra is a subspace of  $B(H)$  that is

- closed to multiplication,
- $*$ -closed
- and norm-closed.

## Definition.

A **(concrete) operator algebra** is a subspace of  $B(H)$  that is

- closed to multiplication
- and norm-closed,

but need not be  $*$ -closed.

# Non-selfadjoint operator algebras

## Reminder.

A  $C^*$ -algebra is a subspace of  $B(H)$  that is

- closed to multiplication,
- $*$ -closed
- and norm-closed.

## Definition.

A **(concrete) operator algebra** is a subspace of  $B(H)$  that is

- closed to multiplication
- and norm-closed,

but need not be  $*$ -closed.

(“Abstract” operator algebras are characterized by matrix norms (Blecher-Ruan-Sinclair).)

# Basic operator algebras

Example.

$M_n$  is a  $C^*$ -algebra.

$B(H)$  is, too.

# Basic operator algebras

## Example.

$M_n$  is a  $C^*$ -algebra.  
 $B(H)$  is, too.

## Example.

If  $X$  is a compact space, then  $C(X)$  is a  $C^*$ -algebra.

# Basic operator algebras

## Example.

$M_n$  is a  $C^*$ -algebra.  
 $B(H)$  is, too.

## Example.

The upper triangular matrices  $T_n$   
are an operator algebra.

## Example.

If  $X$  is a compact space, then  $C(X)$   
is a  $C^*$ -algebra.

# Basic operator algebras

## Example.

$M_n$  is a  $C^*$ -algebra.  
 $B(H)$  is, too.

## Example.

The upper triangular matrices  $T_n$  are an operator algebra.

## Example.

If  $X$  is a compact space, then  $C(X)$  is a  $C^*$ -algebra.

## Example.

If  $X$  is a nice compact domain in  $\mathbb{C}$ , the *holomorphic functions*  $A(X^\circ)$  are an operator algebra.

# Basic operator algebras

## Example.

$M_n$  is a  $C^*$ -algebra.  
 $B(H)$  is, too.

## Example.

The upper triangular matrices  $T_n$  are an operator algebra.

## Example.

If  $X$  is a compact space, then  $C(X)$  is a  $C^*$ -algebra.

## Example.

If  $X$  is a nice compact domain in  $\mathbb{C}$ , the *holomorphic functions*  $A(X^\circ)$  are an operator algebra.

Every group defines a **group  $C^*$ -algebra(s)**.

# Basic operator algebras

## Example.

$M_n$  is a  $C^*$ -algebra.  
 $B(H)$  is, too.

## Example.

The upper triangular matrices  $T_n$  are an operator algebra.

## Example.

If  $X$  is a compact space, then  $C(X)$  is a  $C^*$ -algebra.

## Example.

If  $X$  is a nice compact domain in  $\mathbb{C}$ , the *holomorphic functions*  $A(X^\circ)$  are an operator algebra.

Every group defines a **group  $C^*$ -algebra(s)**.

Every **semigroup** determines a **semigroup operator algebra**.

# Overview

1 Nonselfadjoint operator algebras

2  $C^*$ -covers

- $C^*$ -covers and envelopes
- Meanings of “same  $C^*$ -covers”

3 Future Directions

# $C^*$ -covers and $C^*$ -envelopes

## Fundamental Problem.

Every operator algebra  $A$  generates a  $C^*$ -algebra  $C^*(A)$ .

# $C^*$ -covers and $C^*$ -envelopes

## Fundamental Problem.

Every operator algebra  $A$  generates a  $C^*$ -algebra  $C^*(A)$ .

## Example.

$$C^*(T_n) = M_n.$$

# $C^*$ -covers and $C^*$ -envelopes

## Fundamental Problem.

Every operator algebra  $A$  generates a  $C^*$ -algebra  $C^*(A)$ .

## Example.

$$C^*(T_n) = M_n.$$

But (completely isometrically) isomorphic copies of an operator algebra can generate different  $C^*$ -algebras!

# Examples of $C^*$ -covers

Example.

$$C^*(T_n) = M_n.$$

# Examples of $C^*$ -covers

Example.

$$C^*(T_n) = M_n.$$

Example.

$$T_2 \xrightarrow{\varphi} \mathbb{C} \oplus M_2$$
$$\begin{pmatrix} a & b \\ 0 & c \end{pmatrix} \mapsto \left( a, \begin{pmatrix} a & b \\ 0 & c \end{pmatrix} \right)$$

is an isomorphism onto a copy of  $T_2$ , with  $C^*(\varphi(T_2)) = \mathbb{C} \oplus M_2 \not\cong M_2$ .

# C\*-covers and C\*-envelopes

## Definition.

A **C\*-cover** of an operator algebra  $A$  is a pair  $(C, \iota)$  where

$$\iota : A \hookrightarrow C = C^*(\iota(A))$$

is a (completely isometric) embedding.

# C\*-covers and C\*-envelopes

## Definition.

A **C\*-cover** of an operator algebra  $A$  is a pair  $(C, \iota)$  where

$$\iota : A \hookrightarrow C = C^*(\iota(A))$$

is a (completely isometric) embedding.

(“A C\*-algebra generated by an isomorphic copy of  $A$ .”)

# C\*-covers and C\*-envelopes

## Definition.

A **C\*-cover** of an operator algebra  $A$  is a pair  $(C, \iota)$  where

$$\iota : A \hookrightarrow C = C^*(\iota(A))$$

is a (completely isometric) embedding.

(“A C\*-algebra generated by an isomorphic copy of  $A$ .”)

## Definition-Theorem.

(Arveson, Hamana, Ditschel-McCullough, Arveson (again), Davidson-Kennedy)

The **C\*-envelope** is the unique **smallest** C\*-cover of  $A$ , usually denoted  $C_{\min}^*(A)$ . It exists for any  $A$ .

# $C^*$ -covers and $C^*$ -envelopes

## Definition.

A  **$C^*$ -cover** of an operator algebra  $A$  is a pair  $(C, \iota)$  where

$$\iota : A \hookrightarrow C = C^*(\iota(A))$$

is a (completely isometric) embedding.

(“A  $C^*$ -algebra generated by an isomorphic copy of  $A$ .”)

## Definition-Theorem.

(Arveson, Hamana, Ditschel-McCullough, Arveson (again), Davidson-Kennedy)

The  **$C^*$ -envelope** is the unique **smallest**  $C^*$ -cover of  $A$ , usually denoted  $C_{\min}^*(A)$ . It exists for any  $A$ .

(There is also a “ $C_{\max}^*(A)$ ”.)

# The Disk Algebra

$$A(\mathbb{D}) = \{f : \overline{\mathbb{D}} \rightarrow \mathbb{C} \mid f|_{\mathbb{D}} \text{ is holomorphic}\}$$

# The Disk Algebra

$$\begin{aligned} A(\mathbb{D}) &= \{f : \overline{\mathbb{D}} \rightarrow \mathbb{C} \mid f|_{\mathbb{D}} \text{ is holomorphic}\} \\ &= \overline{\mathbb{C}[z]} \end{aligned}$$

# The Disk Algebra

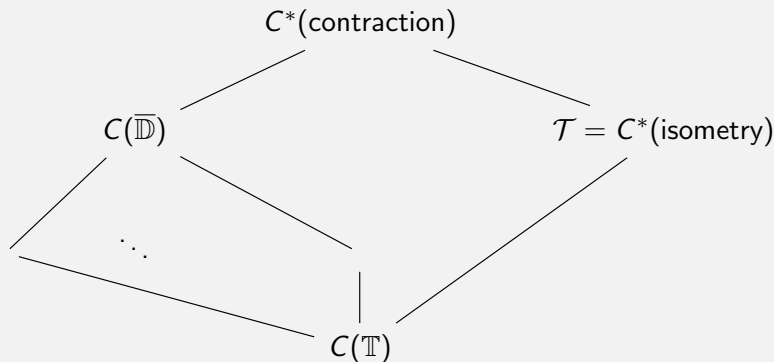

$$\begin{aligned} A(\mathbb{D}) &= \{f : \overline{\mathbb{D}} \rightarrow \mathbb{C} \mid f|_{\mathbb{D}} \text{ is holomorphic}\} \\ &= \overline{\mathbb{C}[z]} \\ &= (\text{universal operator algebra generated by a contraction}) \end{aligned}$$

# The Disk Algebra

$$\begin{aligned} A(\mathbb{D}) &= \{f : \overline{\mathbb{D}} \rightarrow \mathbb{C} \mid f|_{\mathbb{D}} \text{ is holomorphic}\} \\ &= \overline{\mathbb{C}[z]} \\ &= (\text{universal operator algebra generated by a contraction}) \end{aligned}$$

## $C^*$ -covers of $A(\mathbb{D})$

## $C^*$ -cover uniqueness

### Question.

If two operator algebras have “the same  $C^*$ -covers”, are they isomorphic? If not, how different can they be?

## $C^*$ -cover uniqueness

### Question.

If two operator algebras have “the same  $C^*$ -covers”, are they isomorphic? If not, how different can they be?

(Two different operator algebras can have the same  $C^*$ -envelope, or the same  $C^*$ -max.)

# Ordering of $C^*$ -covers

## Definition.

For  $C^*$ -covers, we say that  $(C, \iota) \geq (D, \eta)$  if

$$\begin{array}{ccc} C & \overset{\exists}{\dashrightarrow} & D \\ \uparrow \iota & \nearrow \eta & \\ A & & \end{array}$$

# Ordering of $C^*$ -covers

## Definition.

For  $C^*$ -covers, we say that  $(C, \iota) \geq (D, \eta)$  if

$$\begin{array}{ccc} C & \overset{\exists}{\dashrightarrow} & D \\ \uparrow \iota & \nearrow \eta & \\ A & & \end{array}$$

**Theorem.** (Hamidi, '19) (Thompson, '21)

The order  $\leq$  makes the set of  $C^*$ -covers of  $A$  a **complete lattice**.

# Ordering of $C^*$ -covers

## Definition.

For  $C^*$ -covers, we say that  $(C, \iota) \geq (D, \eta)$  if

$$\begin{array}{ccc} C & \overset{\exists}{\dashrightarrow} & D \\ \uparrow \iota & \nearrow \eta & \\ A & & \end{array}$$

**Theorem.** (Hamidi, '19) (Thompson, '21)

The order  $\leq$  makes the set of  $C^*$ -covers of  $A$  a **complete lattice**.

(A partially ordered set where all subsets have “sups” and “infs”.)

# Ordering of $C^*$ -covers

## Definition.

For  $C^*$ -covers, we say that  $(C, \iota) \geq (D, \eta)$  if

$$\begin{array}{ccc} C & \overset{\exists}{\dashrightarrow} & D \\ \uparrow \iota & \nearrow \eta & \\ A & & \end{array}$$

## Theorem. (Hamidi, '19) (Thompson, '21)

The order  $\leq$  makes the set of  $C^*$ -covers of  $A$  a **complete lattice**.

(A partially ordered set where all subsets have “sups” and “infs”.)

Call it  $C^*\text{-Lat}(A)$ .

# Overview

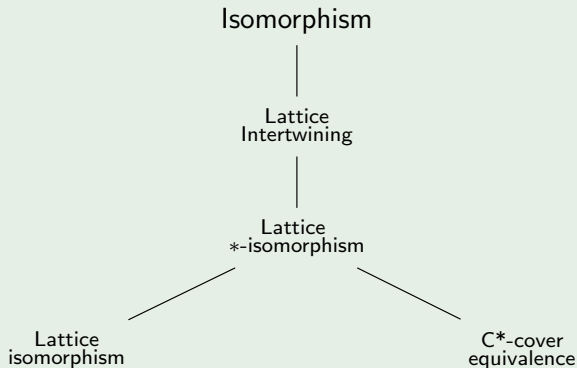

- 1 Nonselfadjoint operator algebras
- 2  $C^*$ -covers
  - $C^*$ -covers and envelopes
  - Meanings of “same  $C^*$ -covers”
- 3 Future Directions

# C\*-cover equivalences

Theorem. (H-Ramsey '23)

The equivalence relations of “same C\*-covers”

between two operator algebras are all distinct.

# $C^*$ -cover equivalences for $A$ and $B$

# $C^*$ -cover equivalences for $A$ and $B$

## $C^*$ -cover equivalence

Every  $C^*$ -cover of  $A$  is  $*$ -isomorphic to a  $C^*$ -cover for  $B$ , and vice versa.

# $C^*$ -cover equivalences for $A$ and $B$

## $C^*$ -cover equivalence

Every  $C^*$ -cover of  $A$  is  $*$ -isomorphic to a  $C^*$ -cover for  $B$ , and vice versa.

## Lattice isomorphism

The lattices  $C^*\text{-Lat}(A)$  and  $C^*\text{-Lat}(B)$  are order isomorphic.

# $C^*$ -cover equivalences for $A$ and $B$

# $C^*$ -cover equivalences for $A$ and $B$

## Lattice $*$ -isomorphism

$C^*\text{-Lat}(A)$  and  $C^*\text{-Lat}(B)$  are order isomorphic via an isomorphism that associates isomorphic  $C^*$ -algebras.

# $C^*$ -cover equivalences for $A$ and $B$

# $C^*$ -cover equivalences for $A$ and $B$

## Lattice intertwining.

$$(C_1, \iota_1) \overset{\pi_{C_1}}{\dashrightarrow} (D_1, \eta_1)$$

$$\begin{array}{ccc} \downarrow & & \downarrow \\ (C_2, \iota_2) & \overset{\pi_{C_2}}{\dashrightarrow} & (D_2, \eta_2) \end{array}$$

(in  $C^*$ -Lat( $A$ ))

(in  $C^*$ -Lat( $B$ ))

# $C^*$ -cover equivalences for $A$ and $B$

## Lattice intertwining.

$$(C_1, \iota_1) \overset{\pi_{C_1}}{\dashrightarrow} (D_1, \eta_1)$$

$$\begin{array}{ccc} \downarrow & & \downarrow \\ (C_2, \iota_2) & \overset{\pi_{C_2}}{\dashrightarrow} & (D_2, \eta_2) \end{array}$$

(in  $C^*$ -Lat( $A$ ))

(in  $C^*$ -Lat( $B$ ))

(Natural isomorphism.)

# Separating Examples

# Separating Examples

## Fact.

If  $(C, \iota)$  is a  $C^*$ -cover for  $A$ , then  $(C, \iota^*)$  is a  $C^*$ -cover for  $A^*$ ,

# Separating Examples

## Fact.

If  $(C, \iota)$  is a  $C^*$ -cover for  $A$ , then  $(C, \iota^*)$  is a  $C^*$ -cover for  $A^*$ ,

so  $A$  and  $A^*$  are intertwined.

# Separating Examples

## Fact.

If  $(C, \iota)$  is a  $C^*$ -cover for  $A$ , then  $(C, \iota^*)$  is a  $C^*$ -cover for  $A^*$ ,

so  $A$  and  $A^*$  are intertwined.

But maybe  $A \not\cong A^*$ !

$$\begin{pmatrix} * & * & * \\ 0 & * & 0 \\ 0 & 0 & * \end{pmatrix} \not\cong \begin{pmatrix} * & 0 & 0 \\ * & * & 0 \\ * & 0 & * \end{pmatrix}.$$

# Separating Examples

# Separating Examples

**Fact.**

If  $C$  is a  $C^*$ -algebra, then

$$C^*\text{-Lat}(C) = \{(C, \text{id})\}.$$

# Separating Examples

**Fact.**

If  $C$  is a  $C^*$ -algebra, then

$$C^*\text{-Lat}(C) = \{(C, \text{id})\}.$$

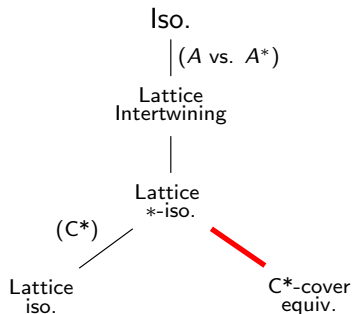

So all  $C^*$ -algebras are lattice iso.

# Separating Examples

# Separating Examples

Fact.

$$\begin{aligned} C^*\text{-Lat}(A \oplus B) \\ = \\ C^*\text{-Lat}(A) \times C^*\text{-Lat}(B). \end{aligned}$$

# Separating Examples

Fact.

$$\begin{aligned} C^*\text{-Lat}(A \oplus B) \\ = \\ C^*\text{-Lat}(A) \times C^*\text{-Lat}(B). \end{aligned}$$

So  $A$  and  $A \oplus (C^*\text{-alg.})$  are lattice iso.

# Separating Examples

Fact.

$$\begin{aligned} C^*\text{-Lat}(A \oplus B) \\ = \\ C^*\text{-Lat}(A) \times C^*\text{-Lat}(B). \end{aligned}$$

So  $A$  and  $A \oplus (C^*\text{-alg.})$  are lattice iso.

$$A \bigoplus (\text{all } C^*\text{-covers of } A)$$

and

$$\bigoplus (\text{all } C^*\text{-covers of } A)$$

are  $C^*$ -cover equiv. but not lattice iso.

# Separating Examples

# Separating Examples

Theorems. (H-Ramsey '23)

What does

$$C^*\text{-Lat}(A \otimes_{\alpha} B)$$

look like?

# Separating Examples

## Theorems. (H-Ramsey '23)

What does

$$C^*\text{-Lat}(A \otimes_{\alpha} B)$$

look like?

$T_2$  and

$$T_2 \otimes M_2 \cong M_2(T_2)$$

are lattice iso. but not intertwined,

# Separating Examples

## Theorems. (H-Ramsey '23)

What does

$$C^*\text{-Lat}(A \otimes_{\alpha} B)$$

look like?

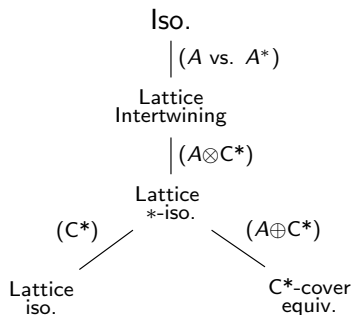

$T_2$  and

$$T_2 \otimes M_2 \cong M_2(T_2)$$

are lattice iso. but not intertwined,

$\oplus$  with all  $C^*$ -covers of both to get lattice \*-iso.

# Separating Examples

## Theorems. (H-Ramsey '23)

What does

$$C^*\text{-Lat}(A \otimes_{\alpha} B)$$

look like?

$T_2$  and

$$T_2 \otimes M_2 \cong M_2(T_2)$$

are lattice iso. but not intertwined,

$\oplus$  with all  $C^*$ -covers of both to get lattice \*-iso.

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

(Can  $A$  be lattice iso. to a  $C^*$ -algebra?)

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

(Can  $A$  be lattice iso. to a  $C^*$ -algebra?)

**(Kirchberg-Wassermann '99)**. The analogous question for operator systems is false.

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

(Can  $A$  be lattice iso. to a  $C^*$ -algebra?)

**(Kirchberg-Wassermann '99)**. The analogous question for operator systems is false.

## Partial Results (H-Ramsey '23)

If  $A$  is Dirichlet, hyperrigid, or embeds in finite dimensions, then  $A$  cannot have a one-point lattice unless it is a  $C^*$ -algebra.

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

## Related Questions.

Can  $C^*$ -Lat( $A$ ) be

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

## Related Questions.

Can  $C^*$ -Lat( $A$ ) be

- finite?

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

## Related Questions.

Can  $C^*$ -Lat( $A$ ) be

- finite?
- of any cardinality?

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

## Related Questions.

Can  $C^*$ -Lat( $A$ ) be

- finite?
- of any cardinality?
- any complete lattice you want?

# Only one $C^*$ -cover?

## Open Question.

If  $A$  has a one-point  $C^*$ -lattice ( $C_{\max}^*(A) = C_{\min}^*(A)$ ), is  $A$  a  $C^*$ -algebra?

## Related Questions.

Can  $C^*$ -Lat( $A$ ) be

- finite?
- of any cardinality?
- any complete lattice you want?

## Another result. (H-Ramsey '23)

Construction of a simple operator algebra which is not similar to a  $C^*$ -algebra.

# Overview
